TABLE OF CONTENTS

FRONT PANEL

Page 11 explains the function of each key.

① **MASTER VOLUME**

② **PHONES jack**
A set of stereo headphones can be connected here to monitor OUTPUT1/L and 2/R.

③ **Display**

④ **MODE/MIDI indicators**
These light when MIDI data is received.

⑤ **PLAY key**

⑥ **COMBI, CARD, PAGE + key**

⑦ **PROG, +10 key, ▷ key**

⑧ **EFFECT, +1, △/YES key**

⑨ **EDIT key**

⑩ **GLOBAL, INT, PAGE key**

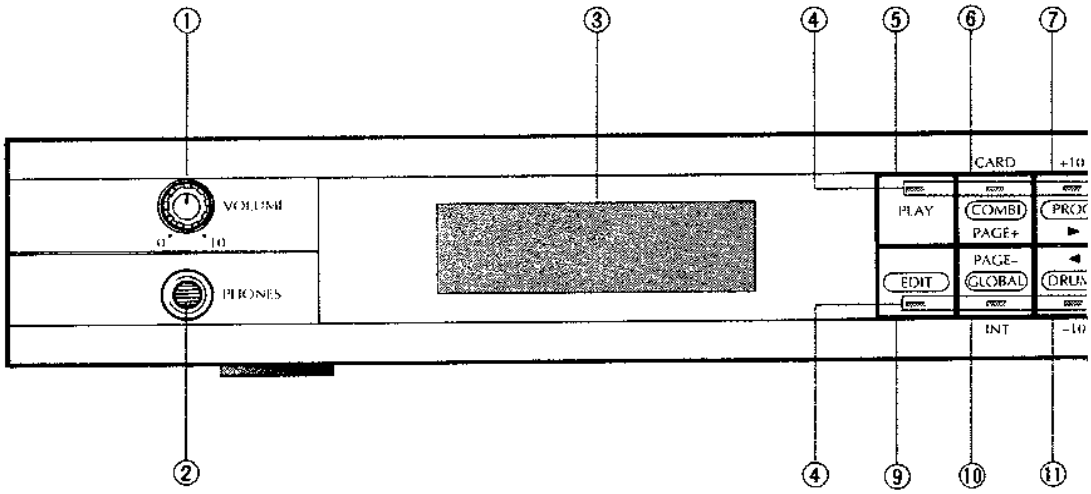
⑪ **DRUMS, –10, ◁ key**

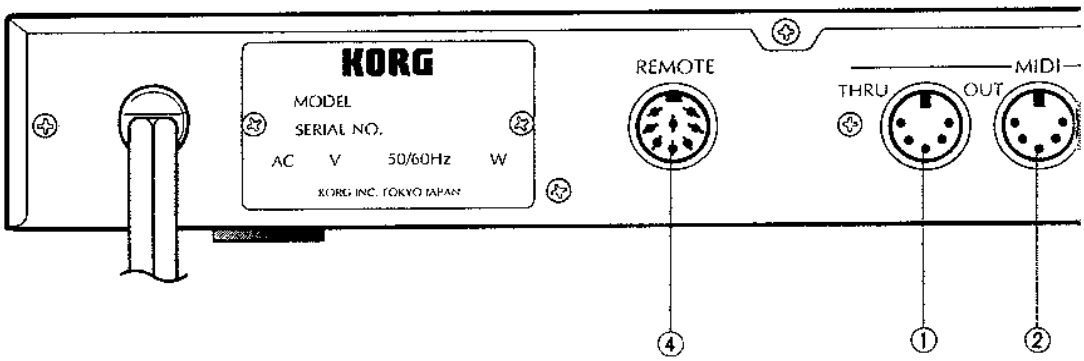
⑫ **–1, ▽/NO key**

⑬ **PCM data slot**
Cards containing PCM (Multisound, Drum sound) data can be inserted here. Do not insert Program cards into this slot.

⑭ **PROG/DEMO data slot**
Cards containing Program data (or into which you will be storing Program data) can be inserted here. Do not insert PCM (Multisound) cards into this slot.

⑮ **POWER Switch**





REAR PANEL

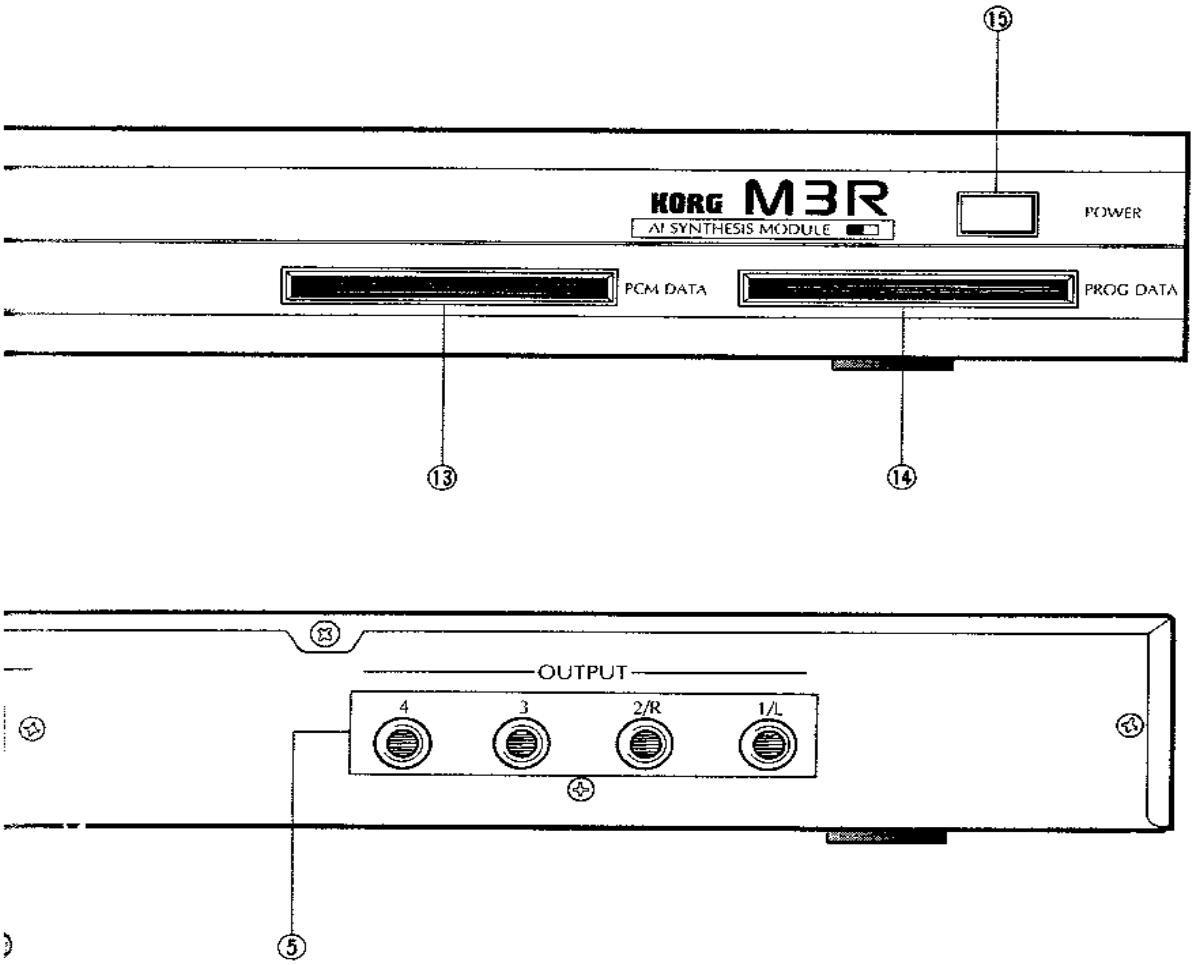
① **MIDI THRU jack**

② **MIDI OUT jack**

③ **MIDI IN jack**

④ **REMOTE jack**
An RE1 remote editor can be connected to this jack.

⑤ **OUTPUT jacks (1/L, 2/R, 3, 4)**
These are the audio outputs of the M3R. Various parameters determine how voices are assigned to each output jack.



INTRODUCTION TO THE KORG M3R

The Korg M3R is a module employing the principles of AI Synthesis to give you stunningly clear bright sounds to add to your MIDI system. It is more than just a "synthesizer without a keyboard", since it also provides a full range of percussion sounds and a complete range of digital effects.

MIDI connections

As the M3R is a rack-mountable module with no controls for playing notes, you will need to connect a MIDI keyboard to the M3R using a MIDI cable from the OUT of the keyboard to the IN of the M3R. If you wish to take full advantage of the multi-timbral capabilities of the M3R, you will need to connect a sequencer as well. The usual way of doing this is:

Keyboard → Sequencer → M3R

using a "THRU" or "ECHO" function on the sequencer. If you are in doubt, consult your local MIDI guru (usually your music store). The MIDI THRU connection on the back of the M3R is used for "daisy-chaining" other MIDI devices from the M3R, and the MIDI OUT is used for the M3R's "Overflow" function or transmitting System Exclusive messages (don't worry about these just yet).

Audio connections

There are four audio output connections on the back panel. Any sound produced by the M3R may be assigned to any one of these outputs, A, B, C or D. In addition, a sound may be assigned to any position between A and B, meaning that if these two outputs are connected to two input channels of a mixer, one panned hard left and one panned hard right, the sound may be placed anywhere in the stereo image. As a further option, a sound may be assigned to be output from C and D equally. This flexibility, combined with the integral effects units, greatly reduces the number of input channels required on a mixer.

Other connections

There is one other connection on the back of the M3R, labelled "REMOTE". This is for the REI remote editor, which provides a larger display and more controls than are found on the front panel of the M3R. Though all editing and program selection can be carried out from the front panel of the M3R, there are times when you may not be close enough to the unit to carry out editing operations, or you may feel the need to see and control more parameters than are visible on the M3R's own display. The REI, then, while not an essential accessory, is certainly an option you should consider if you intend to do a lot of editing work on the M3R. Note that there are no footswitch or other controller input sockets. This is because the M3R is designed to be controlled remotely from another MIDI device, and all performance controls are transmitted via MIDI from these devices.

The only other connections are a headphone socket on the front panel, by the volume control (which affects both headphone volume and the overall volume of the outputs on the back panel), and two card slots. These can hold Korg memory cards - the PCM DATA slot holding Multisound waveform data on ROM (Read-Only Memory) cards, and the PROG DATA slot holding your own edited data on RAM (you can write to them and read from them) cards. Of course, the M3R has its own internal memory, so these slots do not have to be used - but they are a convenient way of expanding the capabilities of the M3R and storing your work.

Synthesizer sound production - a little history

In older analog synthesizers, the heart of the sound-generation section was a bank of one or more voltage-controlled oscillators (VCOs) which produced a simple waveform such as a sine wave, sawtooth or square wave. These waveforms were mixed together and fed through a voltage-controlled filter (VCF) which modified the basic sounds produced from the VCOs to produce a richer, less "mechanical" sound. The amount of filter applied to the basic VCO sound was controllable with regard to time using an Envelope Generator (EG), so a note could, for instance, be filtered sharply at the beginning of a note, and less towards the end, producing a "wow" or "wah" effect. The amount of filtering, pitch and volume could also be controlled by a low-frequency oscillator (LFO), sometimes called a modulation generator (MG), (resulting in vibrato, tremolo, and "wah-wah") before the sound was sent through an EG to the voltage-controlled amplifier (VCA). The EG enabled you to vary the attack and decay times, the sustain level and release time of a sound. Some analog synthesizers had more features than this, others may have had slightly fewer, but the principle was the same in all cases.

Synthesizer sound production - up-to-date with the M3R

You'll be relieved to know that the M3R uses exactly the same principles as the analog synthesizers described above. Of course, since the M3R uses newer technology, there are bound to be a few differences. Here they are.

Firstly, the "oscillators" in the M3R are called "Multisounds". This is because they are not simple sine-, triangle- or square-wave oscillators, but digitally-recorded and created complex waveforms simulating real acoustic instruments. However, if you feel the need for "vintage" synth sounds, the M3R provides you with Multisounds containing the older sine, sawtooth and square waveforms as well. The pitch is controlled by the note played from the controlling keyboard, as well as by other factors, such as the MG and by an EG.

Next, the filters and amplifiers. Since the M3R has its own microprocessor "brain", capable of controlling digital devices, these filters and amplifiers are digitally-controlled. In the M3R they are called VDFs and VDAs (Variable Digital Filter, Variable Digital Amplifier). These are much more reliable and stable than their voltage-controlled equivalents, while providing the same level of flexibility and sound quality. Both the filters and amplifiers can be controlled by EGs as well as by the note played on the keyboard and by an MG.

Older synthesizers had very few expressive controls available to the player - usually a pitch bend control and a device for increasing the amount of modulation. Only expensive synthesizers featured velocity sensitivity and a very few featured aftertouch. (Velocity sensitivity refers to the speed or force with which a key is initially struck, and aftertouch refers to the pressure exerted on a key after it has been struck.) These controllers, as well as some others which vary from machine to machine are now much more common (microprocessors again!), and the M3R is fully equipped to make use of these to modify the sound as you wish.

In addition to these synthesizer voices (or "Programs"), the M3R can also use special kinds of programs called "Drum Kits". In these programs, Multisounds are not used, but each MIDI note is assigned to a different drum sound (taken from the M3R's internal memory). With a Drum Kit, you cannot alter so many parameters as with other types of program, but you can still customize the sounds to make your own personal settings.

The M3R can play 16 notes at a time (including drums). These do not all have to be the same program, as these are combined into (logically enough) "Combinations". Up to eight different programs may be assigned to a Combination in various ways. It is possible to play one program at a time, two programs together, arrange things so that one program plays when a key is hit softly, and another when the same key is played hard, or so that different programs are played by different parts of the keyboard. Different programs may also be selected on different MIDI channels (multi-timbral capability), which is especially useful for work with a sequencer.

Effects

The effects rack of a recording studio used to be a large space filled with bulky, difficult-to-use equipment, which was expensive! Once again, microprocessors have come to the rescue and digital effects which used to be completely out of the price range of smaller studios and individual musicians are now commonplace. The M3R includes two such built-in digital effects units. These effects units can be used as part of a combination to modify the basic program sounds by adding reverb, echo, chorus, flange, delay, etc. There's even a rotary speaker simulation for organ sounds. These effects are not preset types, but allow you as much control as you would expect on a stand-alone digital effects unit.

BASIC OPERATION

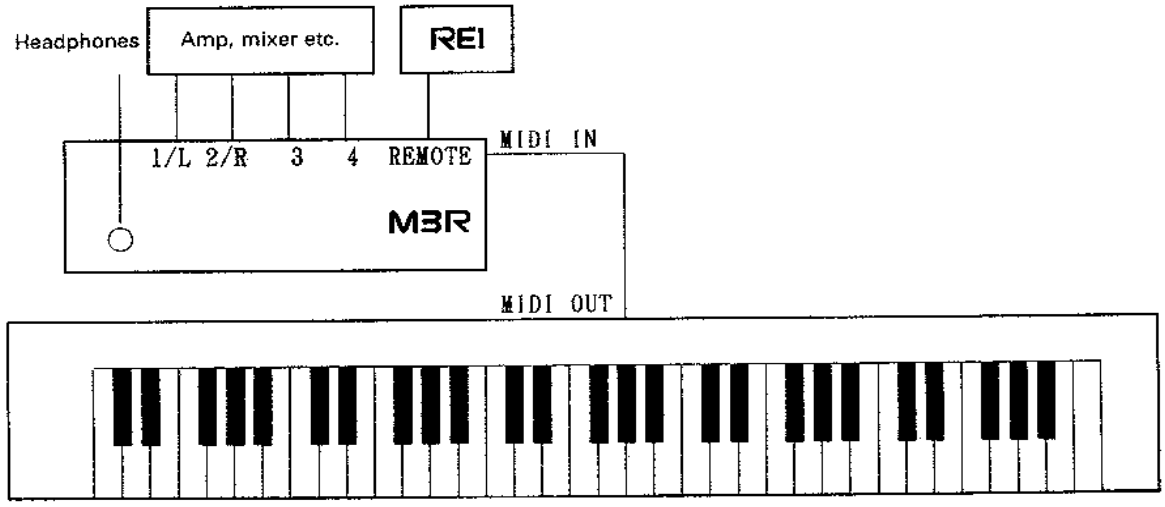
SETUP

(1) Make sure that the power of all MIDI devices and other equipment (amps, mixers, etc.) connected to the M3R is turned off. Turn the volume of all equipment completely down.

(2) Connect the power cable to an AC outlet. Connect the power cables of your other equipment and MIDI devices.

(3) Turn the M3R power on.

(4) After turning the power of the other connected devices on, raise the volume of the M3R and other devices to an appropriate volume level. Unless the MIDI channel of the M3R matches the MIDI channel of your other MIDI equipment, there will be no sound when you play the MIDI keyboard. To set MIDI channels, refer to the following section below "Set the MIDI channel to match the keyboard"



● All notes C-1 – G9 (note numbers 0–127) received at MIDI IN will be sounded. (Some programs may not sound when played in higher ranges.)

Key name	C-1	C0	C1	C2	C3	C4	C5	C6	C7	C8	C9	G9
Note number	0	12	24	36	48	60	72	84	96	108	120	127

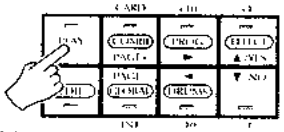
Set the MIDI channel to match the keyboard

(1) While holding the EDIT key, press the GLOBAL key.
(2) Press the PAGE + key twice.
(3) Check that the blinking area is located at "CH= __ ". If it is at a different location, continue pressing the ◁ key.
(4) Press △/YES and ▽/NO to select the desired MIDI channel.

- In combination mode when the Type is Multi, MIDI data of other channels will be received in addition to the channel set here.
- For some Combinations, there may be no sound even though the GLOBAL MIDI channel matches.

HOW TO PLAY COMBINATIONS (GROUPS OF VOICES)

(1) Press the PLAY key. (COMBINATION PLAY mode)



(2) Use the +10/+1/–10/–1 keys to select the Combination you want to play (00–99).

PLAY	CARD	+10	+1
EDIT	INT	–10	–1

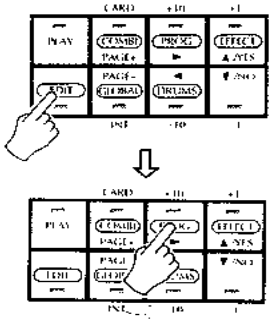
(3) Play the keyboard to hear the selected Combination. (When a multi-type Combination is selected, only the sounds which match its MIDI channel will be heard.)

* You can insert a PROG/DEMO card and press the CARD (COMBI/PAGE+) key to play card voices.

```
100 Krypton
129 174 135 127
```

HOW TO PLAY PROGRAMS (INDIVIDUAL VOICES)

(1) Press the EDIT key followed by the COMBI key (COMBINATION EDIT mode)



(2) Press the PAGE+ key so that "1A TYPE SELECT" is displayed at the top of the screen and the cursor is on the Combination Type parameter (either MULTI, VEL.SW, SPLIT, LAYER, or SINGLE is displayed and flashing). If this is not displayed, use the PAGE+ and ◁ and ▷ keys so this display appears.

(3) Use the -1/NO key to select SINGLE and then move the cursor to the OK? field using the ▷ key. Confirm by pressing +1/YES. The SINGLE field will begin flashing again.

(4) Now press the PAGE+ key so that "2A SINGLE" is displayed at the top of the screen, and a voice number (eg "I84" is flashing). Use the 1/YES and -1/NO keys to select the Program to be played (00-99).

* The effect will not be applied. (When effect interlock is Off.) * If a PROG/DEMO card is inserted, you can press CARD and select sounds from the card as well.

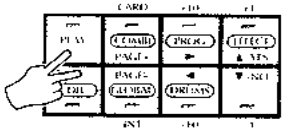
PLAY	PAGE+	▷	△/YES
EDIT	PAGE–	◁	▽/NO

(5) Now play the selected program from your keyboard.

```
0A PROG SELECT
100 :Piano 16'
```

HOW TO HEAR A DEMO SONG

(1) Simultaneously press the PLAY and EDIT keys.



(2) The memory contains five demo songs, with a song number corresponding to each key. If you press ▽ /NO, songs 1–5 will continue playing endlessly. If songs are played individually, playback will stop at the end of the song.

	DEMO 0	DEMO 1	DEMO 2
	DEMO 3	DEMO 4	ENDLSS

(3) Press the PLAY or EDIT key to return to the previous display. To exit, press any key.

- If a ROM card containing demo data is inserted into the PROG DATA slot, the demo from that card will play.
- During demo playback, data is not transmitted from display.

```
SONG0:LadyAmazon
```

Note:

Making changes in sound-related data will affect the playback of the songs.

SOUND CREATION PROCEDURE

1 Select a sound to be the basic element of your new sound (use the Oscillator parameter).

- The basic element of a sound is called a Multisound (tone generator waveform).
- An Oscillator (OSC) is the basic sound-source of a synthesizer.

2 In PROGRAM EDIT mode, modify the Multisound you selected in step 1.

- Use the VDF (Variable Digital Filter) to modify the tone. This can be used to make the tone softer, or to make the tone change over time. For example this could be used to make a sound be bright when first played, become softer as you continue holding the key, and then become bright again when you release the key.
- Use the VDA (Variable Digital Amplifier) to modify volume. This can be used to make the volume change over time. For example, a violin can be made to begin sounding gradually as you continue to hold a key down, and an organ can be made to sound continuously as long as a key is depressed.

● Sounds created in this way are called Programs. The M3R can store 100 Programs (00-99). Programs in internal memory can also be stored on a card.

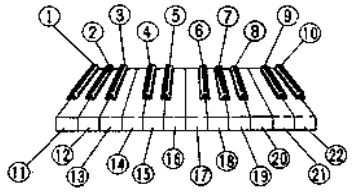
3 In COMBINATION EDIT mode, combine the programs you created in step 2.

- In the first page of COMBINATION EDIT mode, select the COMBI NO. to use.
- Next select the COMBINATION TYPE.
- When LAYER is selected, two programs will sound when a single key is pressed.
- When SPLIT is selected, the right and left areas of the keyboard will play different programs.
- When VELOCITY SWITCH is selected different programs will sound depending on how strongly you play.
- When MULTI is selected, up to 8 programs can be freely combined as using Layer, Split, and Velocity Switch. Since a different MIDI channel can be assigned for each timbre (an instrument to which a program is assigned), select MULTI mode when using the M3R as a multitimbral tone generator for a sequencer.
- When SINGLE in selected, only one program will be played in this combination.

■ Assign the internal drum tone generators to each key in DRUMS mode.

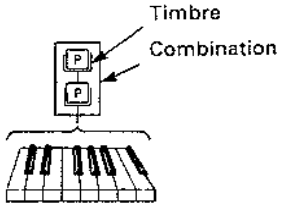
- Pressing a note will play a drum sound.
- This is also where you make settings for pan (the position of the sound in the stereo mix) and pitch.
- An assignment of up to 30 drum sounds is called a Drum Kit.
- A single M3R can remember 4 different drum kits.
- In the same way as for Multisounds, drum kits can be selected as oscillators. This allows you to use PROGRAM EDIT and COMBINATION EDIT to modify the sound of a drum kit.

☆ Example

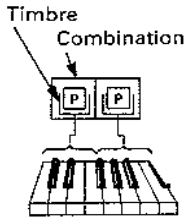


1 BASS DRUM 1	8 HAND CLAPS	15 CLOSED HI HAT
2 SNARE 1	9 HI CONGA (MUTED)	16 PICCOLO SNARE 1
3 HI TOM	10 LO BONGO	17 PICCOLO SNARE 2
4 CLOSED HI HAT	11 BASS DRUM 2	18 CRASH CYMBAL 2
5 OPEN HI HAT	12 SNARE 2	19 RIDE CYMBAL 2
6 CRASH CYMBAL 1	13 MID TOM	20 HI CONGA (OPEN)
7 RIDE CYMBAL 1	14 LO TOM	21 LO CONGA (MUTED)
		22 HI BONGO

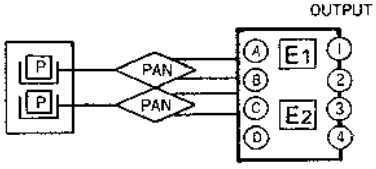
☆ Layer/Velocity Switch



☆ Split



☆ Panning for Layer/Split/Velocity Switch



● The result of these settings is called a Combination. The M3R can store 100 Combinations (00–99). Combinations in internal memory can also be stored on a card.

- When the M3R is in COMBINATION PLAY mode, an incoming MIDI program change on the MIDI channel set in GLOBAL MODE will select a new Combination.
- If a Combination consists of timbres that are each receiving a different MIDI channel, incoming MIDI program changes for each Timbre will operate on the assigned MIDI channel.

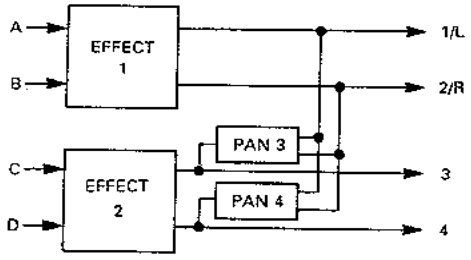
● By making pan settings for the two effects outputs for each timbre, you can use effects creatively .

- The pan setting here is only the pan to the effect. To pan the sound to outputs 1–4, make settings in EFFECT mode.
- Drum kit pan settings made in DRUMS mode have priority. (These settings cannot be set in COMBINATION EDIT mode.)

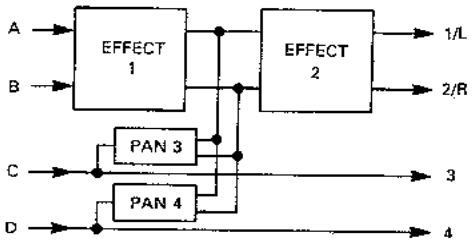
4 Finally, use EFFECT EDIT mode to add an effect to the completed Combination. (One set of effects can be used for each Combination.)

- PAN3 and PAN4 determine panning between EFFECT 1/2.

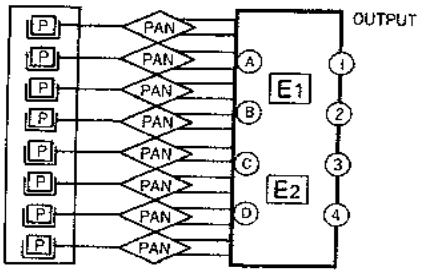
☆ When parallel is selected



☆ When serial is selected

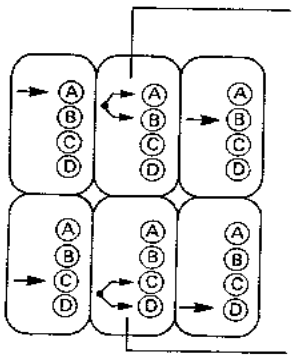


☆ Panning for Multi



■ Panning (PANPOT)

- This determines the assignments to outputs A—D.
- Adjust the volume balance between A:B over the range of 1:9 to 9:1 (A + B = 10).
- For C + D, C and D will be assigned the same volume level.



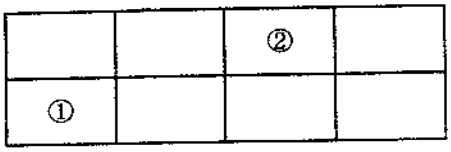
■ In GLOBAL mode, you can make settings that determine the overall pitch, transpose, user scale, memory protect, and MIDI settings of the M3R. You can also transmit/receive data, and save/load data to/from a card and format a card.

MODES AND KEY FUNCTIONS

(1) and (2) indicate the order in which keys should be pressed to enter each mode. The shaded boxes indicate keys whose indicators will light while in that mode.

PROGRAM EDIT mode

To enter this mode



Key functions in this mode

PLAY	PAGE+	▷	△/YES
EDIT	PAGE−	◁	▽/NO

EFFECT mode

To enter this mode

Key functions in this mode

PLAY	PAGE+	▷	△/YES
EDIT	PAGE−	◁	▽/NO

COMBINATION PLAY mode

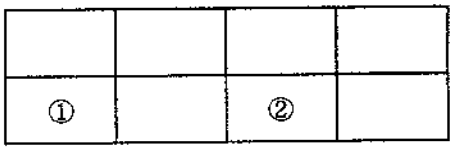
To enter this mode

Key functions in this mode

PLAY	CARD	+10	+ 1
EDIT	INT	−10	− 1

DRUMS mode

To enter this mode



Key functions in this mode

PLAY	PAGE+	▷	△/YES
EDIT	PAGE−	◁	▽/NO

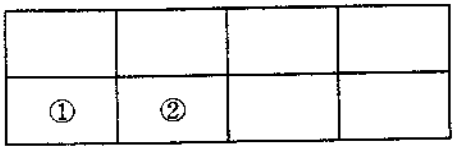
GLOBAL mode

To enter this mode



Key functions in this mode

PLAY	PAGE+	▷	△/YES
EDIT	PAGE−	◁	▽/NO

Note

- When entering modes other than COMBINATION PLAY mode, first press the EDIT key (1), and then press the key for that mode (2).
- In all modes entered after pressing the EDIT key (all modes other than COMBINATION PLAY) the keys will function in the same way.

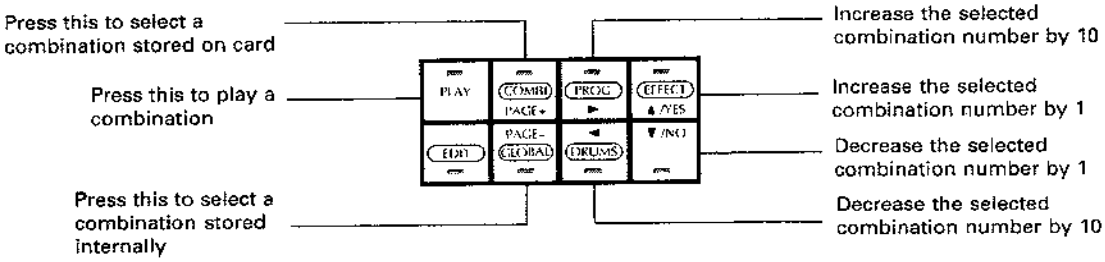
Key functions

PLAY	Enter COMBINATION PLAY mode.
EDIT	Press when entering a mode other than combination play.
PAGE +	Move to the next parameter page of each mode.
PAGE –	Move to the previous parameter page of each mode.
▷	Move the cursor to the right.
◁	Move the cursor to the left.
△/YES	Increase the value of the parameter above the cursor, or answer a "OK?" prompt in the display.
▽/NO	Decrease the value of the parameter above the cursor, or answer a "OK?" prompt in the display.
CARD	Press when you want to play card sounds.
INT	Press when you want to play internal sounds.
+10	Increase the combination number by 10.
–10	Decrease the combination number by 10.
+1	Increase the combination number by 1.
–1	Decrease the combination number by 1.

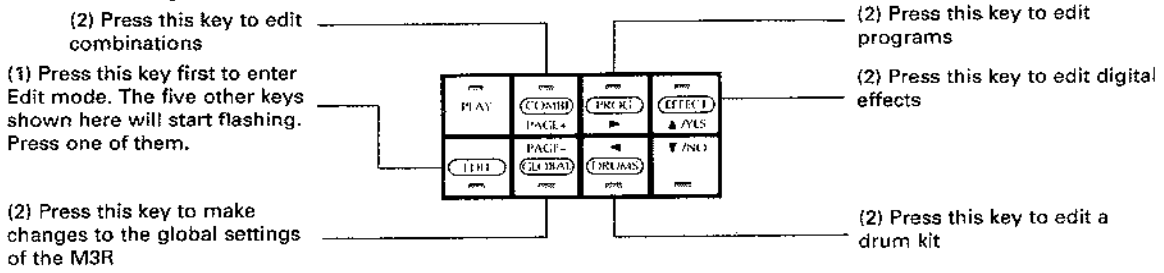
ABOUT THE DISPLAY

◆ The parameters of each mode are divided into pages. Use the PAGE +/– keys to move through the pages.
◆ Some pages are divided into 2–5 screens.

Whereas the control panel of older analog synthesizers used to be covered with an intimidating mass of knobs and patch leads, each dedicated to a particular function, the M3R (in common with other modern synthesizers) has only a few controls with a display to tell you what's going on. Of course, each control (key) has more than one function, depending on what you're doing at the time. Here's a brief guide to what each key does in various modes.
When you're playing combinations:



When you want to edit either a combination, a program, the digital effects, a drum kit, or to make changes to the global settings of the M3R, use the keys as follows:



When you have selected what you want to edit, the keys will change function again. When you are editing, the display is not big enough to display all the parameters you may wish to change. For instance, the whole of the page dealing with selecting a Multisound ("Program edit") looks like this:

Sub-page A	Sub-page B	Sub-page C	Sub-page D	Sub-page E
1A OSC M.SOUND	1B OSC	1C OSC	1D OSC	1E OSC
23:Digi.Bell2	Level70 OCT 8'	Type:M.SOUND	Ass:POLY HLD:OFF	Delay=00

Accordingly, the display is divided into pages and "sub-pages". The current page number is displayed as a number in the upper left corner of the screen, thus:

```
0
```

and the current sub-page number is displayed as a letter immediately following the page number, thus:

```
0A
```

Further sub-pages may follow the current sub-page, and this is indicated by a flashing arrow at the upper right corner of the display:

```
0A PROG SELECT  ▷
I21:DigiBell 2
```

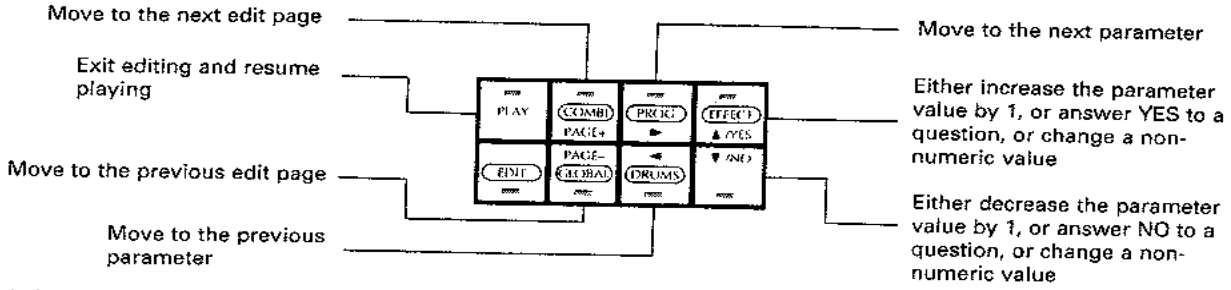
If there are sub-pages which precede the current sub-page, a flashing left-hand arrow is shown at the upper right corner of the display:

```
0C RENAME       ◁
I21:DigiBell 2
```

If there are sub-pages before and after the current sub-page, then the arrow at the upper right corner will flash alternately from a left-hand to a right-hand arrow:

```
0B PROG WRITE  ◁/▷
Write->I21      OK?
```

The parameter being edited will blink. Sometimes there will be more than one parameter in a sub-page, so it is necessary to press either the left or right arrow key to move to a different parameter.



Though the theory may seem a little complex, the practice is easy, and you will soon find yourself pressing the right buttons without too much thought.

▷ This key moves the cursor to the right.
When the upper line shows ▷ (or when ▷ and ◁ are alternately blinking), and the cursor is at the far right of the display, press this key to display the next screen to the right.

◁ This key moves the cursor to the left.
When the upper line shows ◁ (or when ▷ and ◁ are alternately blinking), and the cursor is at the far left of the display, press this key to display the next screen to the left.

△/YES
▽/NO
These two keys modify the value (numerical data, etc.) above the cursor. △ increases the value, and ▽ decreases the value. When making a selection such as combination type, the types will change sucessively.
When executing operations such as Write, a "YES/NO" display will appear, asking you to confirm. If you really want to execute the operation, press YES. If not, press NO.

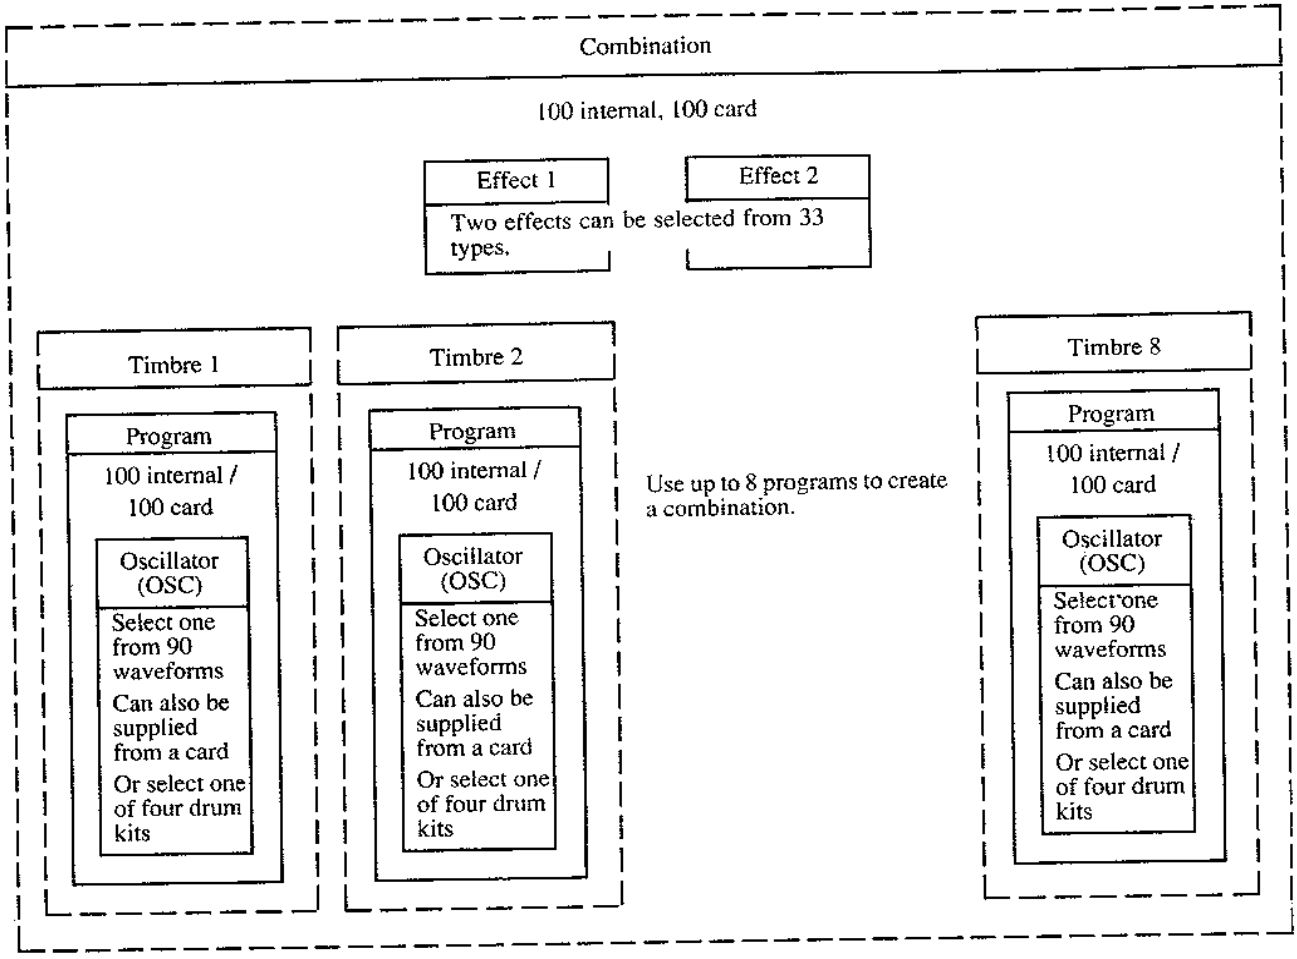
EFFECT INTERLOCK FUNCTION

The effects units built into the M3R can be set for each Combination. They cannot be set independently for each Program or Drum. However, when the Effect Interlock function is On, the Combination effect(s) selected before entering that mode (PROGRAM EDIT, DRUM, etc.) will be applied to the Program or Drum. Use GLOBAL mode [3C] EFFECT INTERLOCK to turn this function On/Off.
For Drum Kit pan settings of C, C+D, D, you will be able to monitor the sound of the Drum Kit by turning the effect placement setting for 3/4 On, and also turn effect interlock On so that you will hear the sound from 1/L, 2/R and the PHONES OUT.

PAGE MEMORY FUNCTION

- Even if after editing a parameter in a mode, you move to another mode and then come back again to the parameter you were editing, the **M3R** allows you to return to the parameter you were editing (before you left the mode). Use GLOBAL mode [3D] PAGE MEMORY to turn this function On/Off. This setting is remembered even when the power is turned off.
  - In modes other than GLOBAL and DRUMS, this function is effective within a single combination/program. If you select another combination/program number when in a different mode, the Page Memory function will no longer work. (However it will be preserved if a Write operation changes the combination/program number.)
  - When editing in COMBINATION EDIT mode or PROGRAM EDIT mode, if you go to another mode and then return, the first screen in the mode will appear. Press the PAGE + key to get back the parameter you were previously editing.
  - In DRUMS mode, you will return to screen A of each page. (The index is memorized.)

HOW THE M3R IS ORGANIZED



MEMORY IN THE M3R

Internal memory

RAM	100 combinations	100 programs	1 global	4 drum kits
ROM	5 demo songs			

Program card memory

③ The screen for each parameter
④ Parameter abbreviation shown in the display
⑤ Parameter name
⑥ Contents or value (number) range of parameter
As the ▽/NO key is pressed, the value shown will approach the minimum (left-hand) value in this column, and as the △/YES key is pressed, the value shown will increase towards the maximum (right-hand) value.
⑦ Description of parameter function

1. PROGRAM EDIT MODE

To enter this mode,

		②	
①			

Press the keys in this order; ① ②

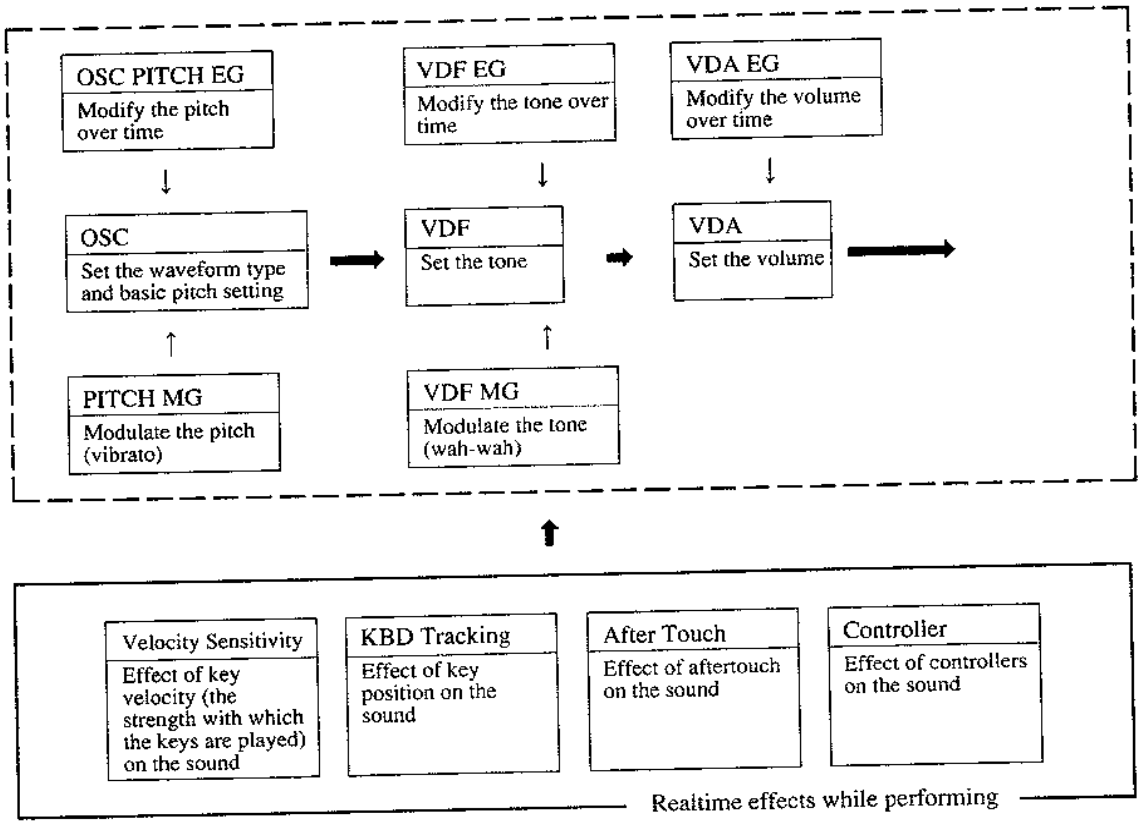
Key functions

PLAY	PAGE+	▷	△/YES
EDIT	PAGE−	◁	▽/NO

= Keys whose indicators will light in this mode

- ○ In this mode, you can make settings for sound program parameters (settings for waveform type, filter EG, etc.).
- ● When you finish editing the program, use [0B] Write Program to write your settings into memory. (If you use [0A]:PROG SELECT to select another program, the program settings you have modified and not stored will be lost.)

Structure of the M3R's program parameters



Functions in Edit Program mode

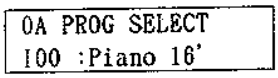
● When you press the PAGE + or PAGE - keys, the first screen of each page ([□A]) will be selected (however for [0□] pages, [0B] WRITE instead of [0A] PAGE SELECT will be selected when you enter from other pages). Use the ▷ and ◁ keys to select a parameter to edit.

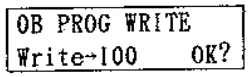
Page		Parameter to be edited	Page reference
0A – 0C	PROG SELECT WRITE/RENAME	Select a program Write or rename a program	18
1A – 1E	OSC	Oscillator waveform, level, octave mode, oscillator type, assign mode, hold Off/On, delay start	18
2A – 2C	OSC PITCH EG	Change in oscillator pitch over time	19
3A – 3D	VDF VDF EG	VDF cutoff, EG intensity Change in VDF cutoff over time	20
4A – 4D	VDF VEL SENS VDF KBD TRK	How key velocity affects VDF How key position affects VDF	21 22
5A – 5C	VDA EG	Change in VDA over time	23
6A – 6D	VDA VEL SENS VDA KBD TRK	How key velocity affects VDA How key position affects VDA	24
7A – 7D	PITCH MG VDF MG	Pitch modulation (vibrato) VDF modulation (wah-wah)	25
8A – 8C	AFTER TOUCH	How aftertouch affects the tone	26
9A – 9C	CONTROLLER	How controllers affect the tone	27

- The total pitch change resulting from pitch bend, pitch EG, pitch modulation, aftertouch, etc. is limited to one octave, (some Multisounds have an even smaller range in certain pitch ranges).
- Tonal changes caused by the VDF parameters, VDF-EG and VDF-MG are limited to the controllable range of the VDF.
- Volume changes caused by oscillator level, VDA and VDA-EG are limited to the controllable range of the VDA.
- When you first enter this mode, the [0A] Program Select display will appear. If the Page Memory function is On, pressing the PAGE+ button will return to the parameter you last selected in this mode before moving to another mode.
- When the Effect Interlock function is Off, no effect will be used in this mode. When it is On, an effect will be used, but will not be written into memory when you execute Program Write.

EDIT PROGRAM

0A — 0C PROG SELECT / WRITE / RENAME





0A		Program Select	I00 – I99 C00 –C99	Select a program to edit
0B	Write	Destination Prog. No.	I00 – I99 C00 –C99	Program number to write
	OK?			Execute write
0C		Rename		Rename

▼ These functions write an edited program into internal memory or into a RAM card.

(1) Use the ◁ ▷ △ /YES ▽ /NO keys to set the program name. (+1/YES and –1/NO step through the character table, and ◁ ▷ are used to position the cursor)
- You can enter a ten-character name using characters and symbols.
- If program memory protect is on, you will not be able to write. (Turn off memory protect using GLOBAL mode [3A].)

(2) Select the program number ([0B]) of the program you wish to write to.
- If a RAM card formatted to COMBI/PROG is inserted, you will also be able to select card memories (C00 — C99) (turn the card protect switch off before writing to a card).

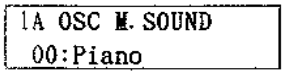
(3) Move the cursor to "OK?" and press the △ /YES key.

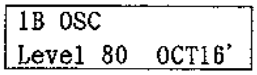
(4) The display will ask "Are You Sure?", so if you want to write the data into memory, press △ /YES.
- The program that was previously in that memory number will be overwritten.
- If you press ▽ /NO, writing will be canceled.

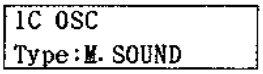
(5) When writing is completed, the display will show "Completed".

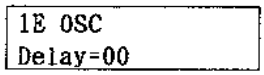
☆ The writing operation in this page can be used to copy a program to another program number.

1A — 1E OSC (oscillator)









1A		Multisound Drums	(Multisound) 00–89 Drumkit1 – Drumkit4 DrumkitC1 – DrumkitC4	Select an OSC multisound (waveform) Select a drum kit (when OSC is set to DRUMS)
1B	Level	OSC Level	0–99	Oscillator volume
	OCT	Octave	16' 8' 4'	Octave setting of oscillator One octave below standard pitch Standard pitch One octave above standard pitch
1C	Type	OSC Type	M.SOUND DRUMS	Type of tone generator Multisound type Drum kit type
1D	Ass	Assign	POLY MONO	Maximum number of voices sounded Play polyphonically up to maximum number of notes Play monophonically
	HLD	Hold	OFF/ON	Hold sound even after key is released
1E	Delay	Delay Start	0–99	Delay from when key is pressed to when oscillator is sounded

▼ When M.SOUND is selected for [1C] OSC Type, select the oscillator type in [1A] Multisound (the back cover has a list of multisounds).
- Each multisound has an upper pitch limit, and playing notes above this limit will produce no sound.
- If an optional PCM card is inserted into the PCM slot, multisounds can be selected from the card as well. If you continue pressing the △ /YES key after "I89", card multisounds beginning with 'C' will be displayed.

☆ **About PCM cards**

Only insert and remove PCM cards when no sound is being produced.
- Multisounds with a name including "NT" will produce the same pitch, regardless of which key is pressed.

▼ When DRUMS is selected for OSC Type, select from Drumkit 1–4 and Drumkit C1–C4 (when a PROG card is inserted).
- In DRUMS mode you can assign drum sounds to a drum kit (Drumkit 1–4).

▼ OSC Level (oscillator level) sets the volume level of the oscillator. 99 is maximum.
- For some voices, setting the oscillator level to the maximum value will result in distorted sound when chords are played. In such case, lower the oscillator level.

▼ Octave sets the basic pitch of the oscillator in steps of an octave.

▼ OSC Type (oscillator type) selects the type of sound source for the program you are creating.
- After changing the OSC Type setting, make settings for [1A] OSC multisound (drum kit) once again.
- This mode allows you to use a drum kit consisting of a set of drum sounds as the sound source.

▼ Assign determines whether this program will be used for chords or for monophonic playing.

▼ If Hold is ON, sound will continue even after a key is released (just as though you had continued pressing the key). This is useful mainly for drum kit sounds.
- If you turn Hold ON for a sustained sound, the sound will continue indefinitely.

▼ Delay Start is the time delay (0 – 99) from when the key is pressed to when the oscillator begins sounding (if you don't want a delay, set this to 0).

2A — 2C OSC PITCH EG (oscillator pitch EG)

2A PITCH EG	2B PITCH EG	2C P. VEL. SENS
SL+00 AT00 AL+00	DT00 RT00 RL+00	EGint+00 EGtm+00

2A	SL	Start Level	–99 – +99	These parameters affect the Shape of the OSC Pitch EG 	AT	Attack Time	0 – 99	
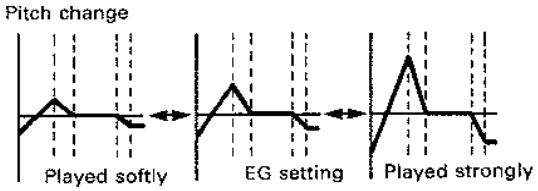
	AL	Attack Level	–99 – +99	
2B	DT	Decay Time	0 – 99	
	RT	Release Time	0 – 99	
	RL	Release Level	–99 – +99	
2C	EGint	EG Level Vel. Sens.	–99 – +99	How key velocity affects EG level
	EGtm	EG Time Vel. Sens.	–99 – +99	How key velocity affects EG time

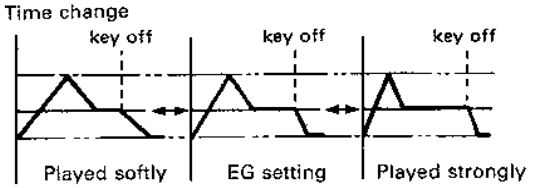
* An EG (envelope generator) affects the sound over time. For example, a pitch EG controls the change in pitch over time.

▼ This determines the change in oscillator pitch over time.
- If the EG levels are reversed (+ and –), the EG shape will be inverted.

▼ When EG Level Vel. Sens. (EG level velocity sensitivity) is set to a positive "+" value, the pitch change will increase as you play more strongly (when set to negative "–" values, the opposite will be the case). However the pitch change produced by the EG is limited to ±1 octave.
- For positive "+" settings:



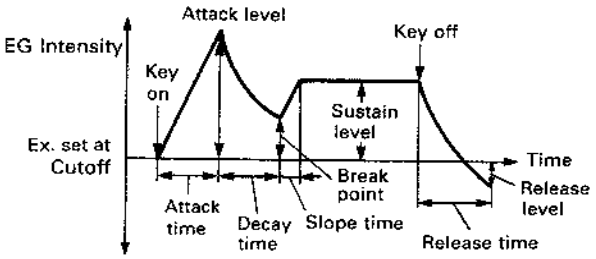
▼ When EG Time Vel. Sens. (EG time velocity sensitivity) is set to a positive "+" value, the time will be shorter as you play more strongly. (When set to negative "–" values, the opposite will be the case.)
- For positive "+" settings:



3A — 3D VDF / VDF EG

3A VDF	3B VDF EG	3C VDF EG	3D VDF EG
Fc38 EGint49	AT00 AL+94 DT94	BP+01 ST80 SL+00	RT99 RL+99

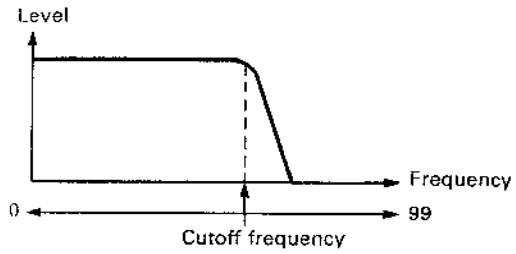
3A	Fc	Cutoff	0 – 99	VDF cutoff (adjusts the brightness of the tone)
	EGint	EG Intensity	0 – 99	
	AT	Attack Time	0 – 99	These parameters affect the shape of the VDF EG.
3B	AL	Attack Level	–99 – +99	
	DT	Decay Time	0 – 99	
3C	BP	Break Point	–99 – +99	
	ST	Slope Time	0 – 99	
	SL	Sustain Level	–99 – +99	
3D	RT	Release Time	0 – 99	
	RL	Release Level	–99 – +99	



The VDF (Variable Digital Filter) regulates the tone by decreasing (cutting off) the overtones of the high frequency range.

▼ Cutoff sets the cutoff frequency of the VDF. Lower settings will result in a softer tone.

▼ EG Intensity determines the amount of change (cutoff) produced by the VDF EG explained in the following item. A setting of 99 allows the cutoff EG to have maximum effect.



* The VDF EG determines the change over time of the VDF cutoff.

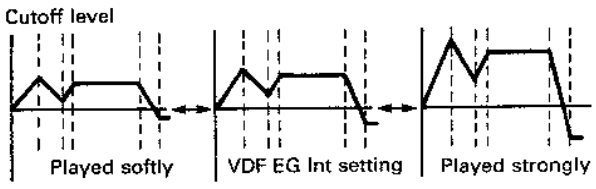
- If the EG levels are reversed (+ and –), the EG shape will be inverted.
- All EG levels are adjusted equally by the VDF EG intensity.

4A — 4D VDF VEL SENS / KBD TRACK (VDF velocity sensitivity / keyboard tracking)

4A VDF V. SENS	4B VDF V. SENS	4C VDF K. TRK	4D VDF K. TRK
EGint+84 EGtm03	AT0 DT+ ST0 RT0	F#3 F-58 EGtm00	AT0 DT0 ST0 RT0

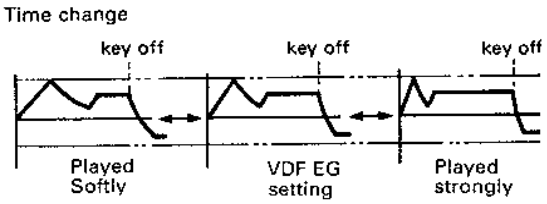
4A	EGint	EG Intensity	–99 – +99	How key velocity affects VDF EG intensity
	EGtm	EG Time	0 – 99	How key velocity affects VDF EG time
4B	AT	Attack Time	–, 0, +	The EG time velocity sensivitity setting can be applied to each of these parameters (Attack Time, etc.) in a different way; negative (–), positive (+), or not applied (0).
	DT	Decay Time	–, 0, +	
	ST	Slope Time	–, 0, +	
	RT	Release Time	–, 0, +	
4C		Center Key	C-1 – G9	The key which will be the center of VDF keyboard tracking (the ± 0 key)
	F	Cutoff	–99 – +99	How key position affects VDF cutoff (brightness)
	EGtm	EG Time	0 – 99	How key position affects VDF EG speed
4D	AT	Attack Time	–, 0, +	The EG time keyboard tracking setting can be applied to each of these parameters (Attack Time, etc.) in a different way; negative (–), positive (+), or not applied (0).
	DT	Decay Time	–, 0, +	
	ST	Slope Time	–, 0, +	
	RT	Release Time	–, 0, +	

▼ EG Intensity (EG intensity velocity sensitivity) determines the effect which key velocity will have on the tone.
- For positive "+" settings, stronger playing will increase the effect of the VDF EG on the cutoff.
- For negative "-" settings, stronger playing will decrease the effect of the VDF EG on the cutoff. The setting for EG Intensity is the standard value (0).
- When set to a positive value:



☆ For most acoustic instruments, softer notes have fewer high-frequency components. To simulate this, set a low cutoff for the VDF, and set positive values for all parameters for VDF EG sustain levels, VDF EG intensity, and VDF EG intensity velocity sensitivity.

▼ EG Time (EG time velocity sensitivity) determines the effect which key velocity will have on the VDF EG speed. For positive "+" settings, stronger playing will shorten the time of the EG (Attack / Decay / Slope / Release Time). (Negative "-" settings will have the opposite effect.)
- When all are set to a positive "+" value:

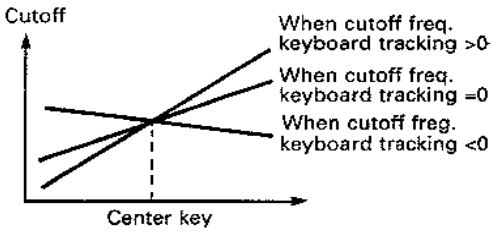


☆ VDF keyboard tracking determines how key position (the number of the played key) will affect the VDF cutoff and the various times of the EG.

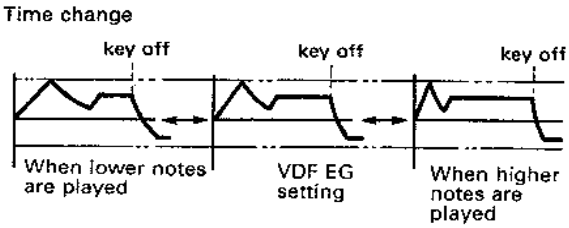
▼ Center Key sets the central key (the key for which cutoff/ EG time does not change) for VDF keyboard tracking.

▼ Positive "+" settings of Cutoff will result in a brighter sound as higher notes are played. Negative "–" settings will have the opposite effect. As the setting approaches –99 or +99, the effect will become greater. For a setting of 0, the change in cutoff will be equal to the change in pitch.

- A setting of –50 results in a horizontal curve (key position will have no effect on the VDF).



▼ For positive "+" settings of EG Time (EG time keyboard tracking), notes higher than the center key will have an increasingly shorter VDF EG time (Attack / Decay / Slope / Release Time). Negative "–" settings will have the opposite effect.

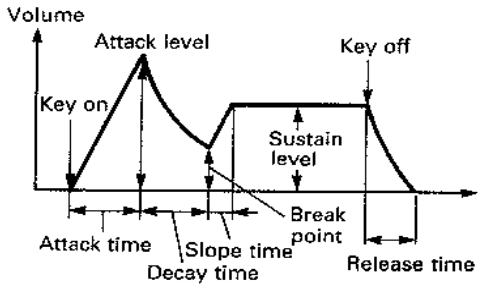


5A — 5C VDA EG

5A VDA EG	5B VDA EG	5C VDA EG
AT00 AL75 DT22	BP99 ST93 SL00	RT28

5A	AT	Attack Time	0 – 99
	AL	Attack Level	0 – 99
	DT	Decay Time	0 – 99
5B	BP	Break Point	0 – 99
	ST	Slope Time	0 – 99
	SL	Sustain Level	0 – 99
5C	RT	Release Time	0 – 99

VDA volume change over time



☆ The VDA (variable digital amplifier) changes the volume of the waveform over time.

▼ The VDA EG determines how the volume changes over time.

6A — 6D VDA VEL SENS / KBD TRK (VDA velocity sensitivity / keyboard tracking)

6A VDA V. SENS	6B VDA V. SENS	6C VDA K. TRK	6D VDA K. TRK
Amp+76 EGtm00	ATO DTO STO RTO	F#4 A+00 EGtm00	ATO DTO STO RTO

6A	Amp	Amplitude	–99 – +99	How key velocity affects VDA EG intensity
	EGtm	EG Time	0 – 99	How key velocity affects VDA EG time
6B	AT	Attack Time	–, 0, +	The EG time velocity sensivitity setting can be applied to each of these parameters (Attack Time, etc.) in a different way; negative (–), positive (+), or not applied (0).
	DT	Decay Time	–, 0, +	
	ST	Slope Time	–, 0, +	
	RT	Release Time	–, 0, +	
6C		Center Key	C-1 – G9	The center key for VDA keyboard tracking (± 0 key)
	A	Amplitude (amplitude keyboard tracking)	–99 – +99	How key position affects VDA volume change
	EGtm	EG Time (EG time keyboard tracking)	0 – 99	How key position affects VDA EG speed
6D	AT	Attack Time	–, 0, +	The EG time keyboard tracking setting can be applied to each of these parameters (Attack Time, etc.) in a different way; negative (-), positive (+), or not applied (0). 	DT	Decay Time	–, 0, +	
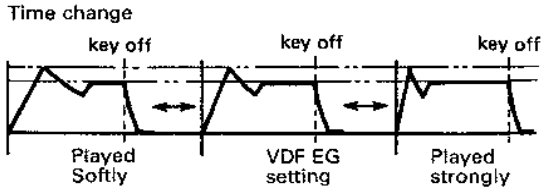
	ST	Slope Time	–, 0, +	
	RT	Release Time	–, 0, +	

▼ Amplitude (amplitude velocity sensitivity) determines how the key velocity will affect the volume. Positive "+" settings will result in a louder volume as you play more strongly. Negative "–" settings will result in a softer volume as you play more strongly. As the setting approaches –99 or +99, key velocity will have a greater effect on the volume.

▼ EG Time (EG time velocity sensitivity) determines how the key velocity will affect the speed of the VDA EG. Positive "+" settings will result in a shorter VDA EG time (Attack / Decay / Slope / Release Time) as you play more strongly. Negative "–" settings will result in a longer VDA EG time as you play more strongly.
• When all are set to a positive "+" value:



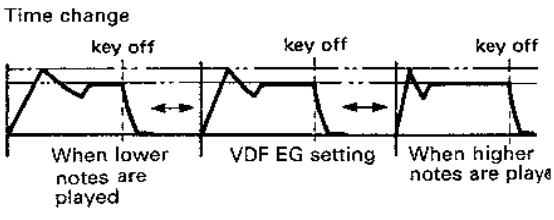
☆ For sounds such as strings, setting a positive "+" attack time will result in a sharp attack for strongly played notes, and a slow attack for softly played notes.

* VDA keyboard tracking determines how the key position will affect the VDA volume and the various times of the EG.

▼ Center Key sets the central key (the key for which volume / EG time does not change) for VDA keyboard tracking.

▼ Positive "+" settings of Amplitude will result in a louder volume for higher notes. Negative "–" settings will result in a softer volume for higher notes.
• The volume resulting from the keyboard tracking setting will remain in the range of 0–99 (the maximum value of OSC level).

▼ Positive "+" settings of EG Time (EG time keyboard tracking) will result in an increasingly shorter VDA EG time (Attack / Decay / Slope / Release Time) for notes above the center key. Negative "–" settings will result in the opposite effect.



7A — 7D PITCH MG / VDF MG (pitch modulation / VDF modulation)

7A PITCH MG	7B PITCH MG	7C VDF MG	7D VDF MG
TRI Frq64 Dly00	Int00 K.Sync:OFF	TRI Frq64 Dly00	Int00 K.Sync:OFF

7A		Waveform	TRI SAW ↑ SAW ↓ SQR	Select the modulation waveform Triangle wave Sawtooth wave 1 Sawtooth wave 2 (reversed polarity) Square wave
	Frq	Frequency	0 – 99	The speed of the modulation effect
	Dly	Delay	0 – 99	The delay from when the note is played to when the modulation begins
7B	Int	Intensity	0 – 99	The intensity of the modulation effect
	K.Sync	Key Sync	OFF ON	Modulation affects each note in the same way
7C		Waveform	The same as for 7A	
	Frq	Frequency		
	Dly	Delay		
7D	Int	Intensity	The same as for 7B	
	K.Sync	Key Sync		

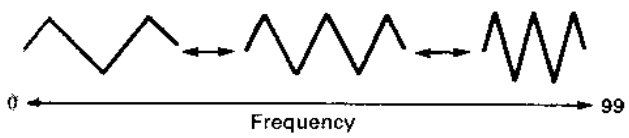
* Pitch MG (pitch modulation) periodically changes (adds vibrato to) the pitch.

▼ Waveform selects the modulation waveform (shape of change).

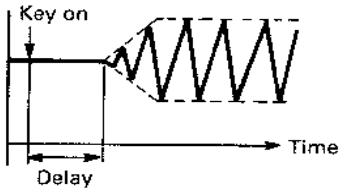
- TRI — Triangle wave (most frequently used)
- SAW ↑ — Sawtooth wave 1
- SAW ↓ — Sawtooth wave 2 (reversed polarity)
- SQR — Square wave

▼ Frequency determines the speed of the modulation. 99 is the fastest.

- When triangle wave modulation is selected:

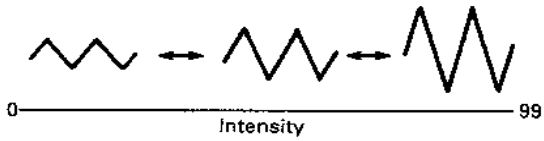


▼ Delay is the time from when the note is played to when the modulation begins.



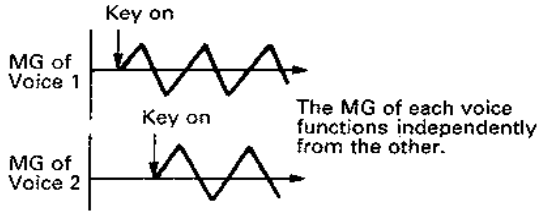
▼ Intensity is the depth of modulation

- When triangle wave modulation is selected:

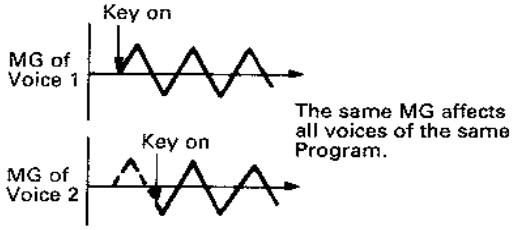


▼ When Key Sync is set ON, the modulation waveform will begin again as each note is played.

- Key Sync ON



- Key Sync OFF



* VDF MG (VDF modulation) periodically modulates the cutoff frequency (wah-wah effect).

- Details are the same as for [7A] — [7B] Pitch MG.
- If the VDF MG waveform is SQR, there will no effect when the VDF cutoff is raised.

8A — 8C AFTERTOUCH

8A AFTER TOUCH	8B AFTER TOUCH	8C AFTER TOUCH
Pitch+00 P. MG00	Fc+00 VDF. MG00	Amp+00

8A	Pitch	PITCH	–12 – +12	How aftertouch affects pitch (within ±1 octave)
	P.MG	Pitch MG	0 – 99	How aftertouch affects pitch modulation
8B	Fc	VDF Cutoff	–99 – +99	How aftertouch affects cutoff (tone)
	VDF.MG	VDF MG	0 – 99	How aftertouch affects VDF modulation
8C	Amp	VDA Amplitude	–99 – +99	How aftertouch affects volume

* Aftertouch allows you to modify the sound by pressing down on the keyboard after playing a note.

▼ Pitch determines the amount and direction in which aftertouch will affect pitch, over a range of –12 to +12 (±1 octave in semitone steps).

▼ Higher settings of Pitch MG (pitch modulation) will result in a greater pitch MG effect as you press harder on the keyboard. At a setting of 0, aftertouch will have no effect.

☆ The settings of [7A] [7B] Pitch MG (pitch MG waveform and key sync) will be used.

▼ Positive "+" settings of VDF Cutoff will make the cutoff value increase (the sound becomes brighter) as you press harder on the keyboard. Negative "–" settings will have the opposite effect.

▼ Higher settings of VDF MG (VDF modulation) will result in a greater VDG MG effect as you press harder on the keyboard. At a setting of 0, aftertouch will have no effect.

☆ The settings of [7C] [7D] VDF MG will be used.

▼ Positive "+" settings of VDA Amplitude will result in an increased volume as you press harder on the keyboard. Negative "–" settings will have the opposite effect.

9A — 9C CONTROLLER BEND/SWEEP

9A BEND/SWEEP	9B PITCH CTRL	9C VDF CTRL
P.Bend+02 VDF+00	MGint05 MGfreq0	MGint10 MGfreq0

9A	P.Bend	Pitch Bend	–12 – +12	Maximum amount of pitch change
	VDF	VDF Sweep Intensity	–99 – +99	How pitch bend affects VDF cutoff
9B	MGint	Pitch MG Intensity	–99 – +99	How controllers affect the pitch modulation intensity
	MGfreq	Pitch MG Frequency	0 – 3	How controllers affect the pitch modulation frequency
9C	MGint	VDF MG Intensity	0 – 99	How controllers affect the VDF modulation intensity
	MGfreq	VDF MG Frequency	0 – 3	How controllers affect the VDF modulation frequency

* These functions determine how the joysticks, modulation wheels, etc. of external MIDI keyboards will affect the sound of the M3R. The M3R receives pitch bender messages to control pitch bend and VDF sweep, control change 1 to control pitch modulation, and control change 2 to control VDF modulation.
  - When the M3R is connected to an M1, DS-8, DSS1, etc., left/right movement of the joystick will control pitch bend, upward movement will control pitch modulation, and downward movement will control VDF modulation.

▼ Pitch Bend determines the range in semitones over which pitch can be changed by a pitch bend wheel or other controller. For the maximum setting of 12, the range of pitch change will be 1 octave.

▼ VDF Sweep Intensity determines how the pitch bender will affect VDF cutoff.

▼ Higher settings of Pitch MG Intensity will make a joystick etc. have a greater effect on pitch modulation.

▼ Pitch MG Frequency determines how a joystick etc. will affect the speed of pitch modulation.

☆ At a setting of 0, the speed that was set in [7A] will be used. For settings of 1–3, the joystick etc. will increase the speed that was set in [7A].

☆ The settings of [7A] [7B] Pitch MG will determine the pitch modulation waveform and key sync.

▼ Higher settings of VDF MG Intensity will make a joystick etc. have a greater effect on VDF modulation intensity.

▼ VDF MG Frequency determines how a joystick etc. will affect the speed of VDF MG.

☆ The settings of [7C] [7D] VDF MG will determine the waveform and key sync of the VDF MG.

2. COMBINATION PLAY MODE

To enter this mode

①			

①=press this key

Key functions

PLAY	CARD	+10	+ 1
EDIT	INT	−10	− 1

= Keys whose indicators light when in this mode

In this mode, you can select and play a Combination (a combination of two or more programs). Combinations can be selected using the +10, +1, −1, and −10 keys or by MIDI program changes.

- When "INT" is selected, combinations will be selected from internal memory, and when "CARD" is selected, from a card.
- When selecting a combination via MIDI, use GLOBAL mode [2A] to set the MIDI channel of the M3R to match the channel of the transmitting device, and set [2B] to activate the function.
- ☆ In multi mode, program changes are received independently by each timbre on its own MIDI channel, but when a program change is received on the global MIDI channel, it will change Combinations.
- ☆ There is no restriction on the number of simultaneous notes that can be produced by an individual Program. (Notes will be produced until the total number of oscillators used by all voices reaches 16.)
- The display in COMBINATION mode will differ according to the type of each combination.

The page memory function can be used when the REI is connected (when On).

SINGLE

		Combination	I00 – I99 C00 – C99	Select a combination

LAYER

		Combination	I00 – I99 C00 – C99	Select a combination

SPLIT

		Combination	I00 – I99 C00 – C99	Select a combination

VELOCITY SW

		Combination	I00 – I99 C00 – C99	Select a combination

MULTI

		Combination	I00 – I99 C00 – C99	Select a combination

When MIDI data is received by timbres 1 – 8, the corresponding front panel LED for each timbre will blink on. (The keys correspond to timbres 1 – 8 as shown in the diagram at right.) Keys whose LED is already lit to indicate the selected mode will blink off.

- When in Single mode, T1 will light. When in Layer, Split, or Vel.SW modes T1 and T2 will light (or go out) simultaneously.
- When receiving exclusive data, the LEDs currently on (for mode indication) will go off.

T1	T2	T3	T4
T5	T6	T7	T8

3. COMBINATION EDIT MODE

To enter this mode

	②		
①			

① ② =press this key

Key functions

PLAY	PAGE+	▷	△/YES
EDIT	PAGE−	◁	▽/NO

= Keys whose indicators light when in this mode

In this mode you can create a Combination of two or more programs.
There are five types of M3R Combinations; SINGLE, LAYER, SPLIT, VELOCITY SPLIT, and MULTI. Each Combination consists of 1—8 timbres. Each timbre consists of a program, and performance and output parameters (pan, level, MIDI channel, etc.). Each Combination also has a set of effect parameters which affect the entire combination.

- Use [0A] COMB SELECT to select the combination to edit.
- When you have finished editing a Combination, use [0B] Combination Write to write the data into memory. (If you use [0A] to select another Combination before writing your edited settings into memory, your edits will be lost.)
- If a memory card containing program data is inserted into the front panel slot, you will be able to select programs from the card. (When using a Combination which uses card programs, be sure that the appropriate card is inserted. If a card is not inserted, there will be no sound when the card number is selected. If an inserted card is removed, the internal program of the same number will be used instead.)

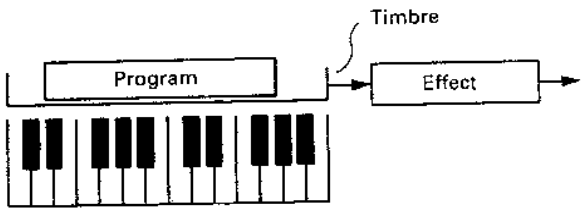
Parameters will differ according to the type of combination, so the following explanation is divided by combination type. Refer to the explanation for the selected type of combination.

About combination types

Single

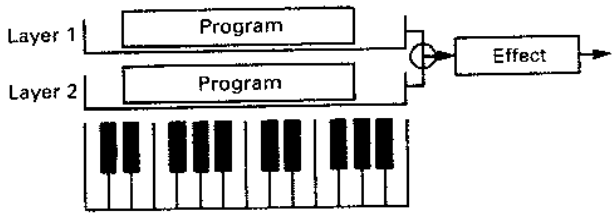
This combination type consists of a single program.

☆ If you write an unmodified program into memory as a single combination, you will be able to change sounds without having to switch between program and combination modes.



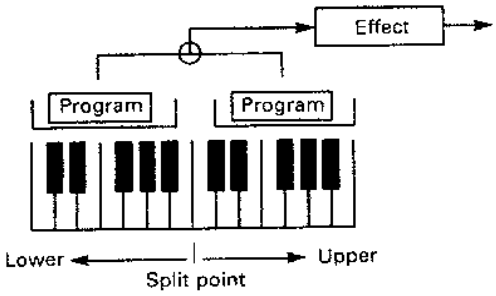
Layer

This combination type allows you to play two timbres mixed together.



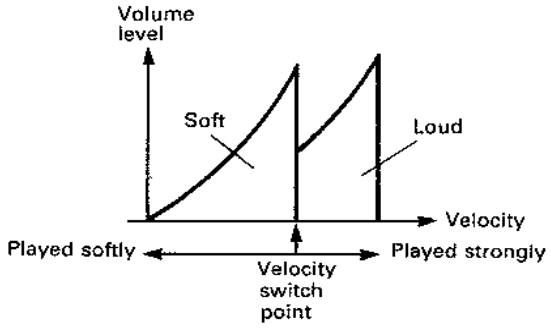
Split

This combination type allows you to play two timbres from different ranges of the keyboard.



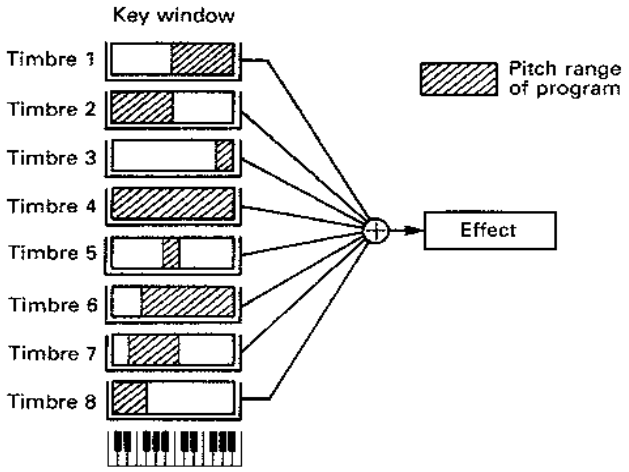
Velocity switch

This combination type allows you to select between two timbres by the force of your playing (key velocity).



Multi

A multi combination allows you to use up to 8 timbres, each with its own independent program, MIDI channel, keyboard range, and velocity range. This allows you to use the M3R as a multi-timbral tone generator, or to create complex split and layering effects that would not be possible with other combination types.

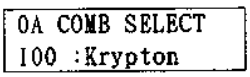


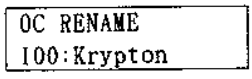
Functions common to all combination types

- When you first enter COMBINATION EDIT mode, the [0A] COMBINATION SELECT page will appear. Pressing the PAGE+ button when the Page Memory function is on will jump to the parameter last selected in this mode before moving to another mode. Use the PAGE + and PAGE – keys to select the page that contains the parameters you want to edit (However if you enter page 0 [] from another page, 0B Comb Write will be selected instead of 0A Comb Select.)
- The functions of page 2 and later pages will differ according to the Combination type. Refer to the explanation for the appropriate Combination type.
- Effect settings can be made in EFFECT EDIT mode, and stored for each Combination number.

Page		Parameter to edit	Page reference
0A – 0C	COMBINATION SELECT	Select a Combination	34
	WRITE/RENAME	Write / rename a combination	
1A	TYPE SELECT	Select a combination type	35

0A — 0C SELECT / WRITE / RENAME





0A		COMBINATION SELECT	I00 – I99 C00 – C99	Select a combination
0B		Destination Prog. No.	I00 – I99 C00 – C99	Combination number to write
	[OK?]			Execute writing
0C				Rename

▼ This function is used to write an edited Combination into internal memory or into a RAM card.
- Writing is not possible if combination memory protect is "ON". Turn memory protect off in GLOBAL mode [3B].

(1) In [0C], use the ▷, ◁, △/YES, and ▽/NO keys to enter a combination name.
- You may assign a 10-character name using characters and symbols.

(2) In [0B], select the combination number for the writing destination.
- If a RAM card formatted to COMBI/PROG is inserted, you will also be able to select card memories (C00 – C99). Before writing data into a card, turn the card protect switch to "OFF".

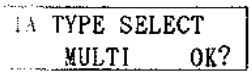
(3) Move the cursor to "OK?" and press △/YES.

(4) The display will ask "Are You Sure?", so if you want to write the data into memory, press △/YES again.
- The Combination data previously in that memory will be lost.
- If you press ▽/NO, writing will be canceled.

(5) When writing ends, the display will show "Write Completed".

☆ Use this writing function when copying a Combination to another combination number.

1A TYPE SELECT



1A		TYPE SELECT		Select a combination type
			SINGLE	Single
			LAYER	Layer
			SPLIT	Split
			VEL. SW	Velocity switch
			MULTI	Multi
	OK?	[OK?]		Confirm selection

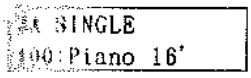
▼ Use TYPE SELECT to select the type of combination.

- Select a new type, move the cursor to "OK?" and press △/YES, and the specified combination type will be selected. If you move to another page without pressing △/YES, your choice will be canceled.

SINGLE type functions

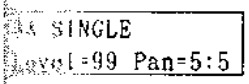
Page		Parameter to edit	Page reference
2A	PROGRAM	Program number	35
3A	LEVEL/PANPOT	Level / pan (output destination)	35

2A PROGRAM



2A		Program	I00 – I99 C00 – C99	Select a program number

3A LEVEL / PANPOT



3A	Level	Level	0 – 99	Level (volume) setting
	Pan	Panpot	A, 9:1 – 1:9, B, C, C+D, D	Output destination setting

▼ Level determines the volume. For a setting of 99 the volume will be the full volume as set by the Program parameter. A setting of 0 completely mutes the Program.

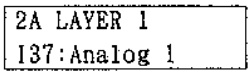
▼ Panpot determines the output destination. Select from A, A:B (9:1 to 1:9), B, C, C+D, and D.

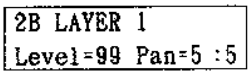
- When a drum kit program is selected, the display will indicate "SND", and the pan settings of DRUMS mode will be used(This setting cannot be made here.)

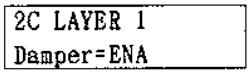
LAYER type functions

Page		Parameter to edit	Page reference
2A – 2C	LAYER1 PROG/LEVEL/ PANPOT/DAMPER FILTER	Layer 1 program number, output level, pan (output destination), and damper	36
3A – 3D	LAYER2 PROG /LEVEL/ PANPOT / INTERVAL / DETUNE / DAMPER FILTER	Layer 2 program number, output level, pan (output destination), and damper	37

2A — 2C LAYER1 PROGRAM / LEVEL / PANPOT / DAMPER FILTER







2A		Layer 1 Program	I00 – I99 C00 – C99	Layer 1 program number
2B	Level	Layer 1 Level	0 – 99	Layer 1 level adjustment
	Pan	Layer 1 Panpot	A, 9:1 – 1:9, B, C, C+D, D	Layer 1 output destination
2C	Damper	Layer 1 Damper Filter	DIS/ENA (Disable/Enable)	Layer 1 damper disable/enable

▼ Layer 1 Program sets the program number for layer 1.

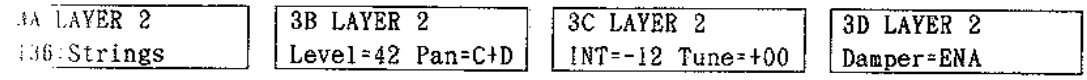
▼ Layer 1 Level sets the volume for layer 1. For a setting of 99 the volume will be the full volume as set by the Program parameter. A setting of 0 completely mutes the program.

▼ Layer 1 Panpot determines the output destination of layer 1. Select from A, A:B (9:1 to 1:9), B, C, C+D, and D.

- When a drum kit program is selected, the display will indicate "SND", and the pan settings of DRUMS mode will be used. (This setting cannot be made here.)

▼ When Layer 1 Damper Filter is set to "DIS" (disable) the damper pedal will not affect the sound of layer 1.

3A — 3D LAYER2 PROGRAM / LEVEL / PANPOT / INTERVAL / DETUNE / DAMPER FILTER



3A		Layer 2 Program	I00 – I99 C00 – C99	Layer 2 program number
3B	Level	Layer 2 Level	0 – 99	Layer 2 level adjustment
	Pan	Layer 2 Panpot	A, 9:1 – 1:9, B, C, C + D, D	Layer 2 output destination
3C	INT	Layer 2 Interval	–24 – +24	Pitch difference between layer 1 and layer 2 (semitones steps)
	Tune	Layer 2 Detune	–50 – +50	Pitch difference between layer 1 and layer 2 (1 cent steps)
3D	Damper	Layer 2 Damper Filter	DIS / ENA	Layer 2 damper disable/enable

▼ Layer 2 Program sets the program number for layer 2.

▼ Layer 2 Level sets the volume for layer 2. For a setting of 99 the volume will be the full volume as set by the Program parameter. A setting of 0 completely mutes the program.

▼ Layer 2 Panpot determines the output destination of layer 2. Details are the same as for Layer 1 Panpot.

▼ Layer 2 Interval is the pitch difference of layer 2 relative to layer 1 in semitones (±2 octaves).

▼ Layer 2 Detune is the pitch difference of layer 2 relative to layer 1 in steps of 1 cent (±50 cents). (100 cents is a semitone, and 1200 cents is one octave.)

▼ Layer 2 Damper Filter has the same effect as explained for Layer 1 Damper Filter.

SPLIT type functions

Page		Editing parameter	Page reference
2A	SPLIT POINT	Split point	38
3A – 3C	LOWER PROG / LEVEL / PANPOT / DAMPER FILTER	Lower program number, output level, pan (output destination), and damper	38
4A – 4C	UPPER PROG / LEVEL / PANPOT / DAMPER FILTER	Upper program number, output level, pan (output destination), and damper	39

2A SPLIT POINT

```
2A SPLIT
Point=C4
```

2A	SP	Split Point	C#-1 – G9	Split point setting

▼ The Split Point determines the key which separates the two programs.

3A — 3C LOWER PROGRAM / LEVEL / PANPOT / DAMPER FILTER

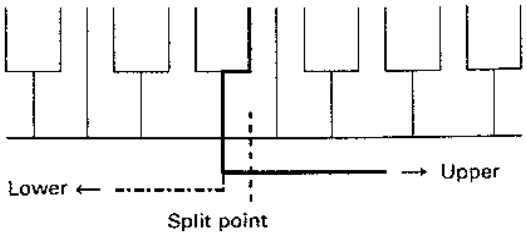
```
3A LOWER
I00:Piano 16'
```

```
3B LOWER
Level=99 Pan=5:5
```

```
3C LOWER
Damper=ENA
```

3A		Lower Program	I00 – I99 C00 – C99	The Program which will sound below the split point
3B	Level	Lower Level	0 – 99	Lower program level adjustment
	Pan	Lower Panpot	A, 9:1–1:9, B, C, C+D, D	Lower program output destination
3C	Damper	Lower Damper Filter	DIS/ENA	Lower program damper disable/enable

▼ Lower Program selects the program which will sound when a key lower than the split point is played.



- The split point will be the lowest note of the upper side.

▼ Lower Level sets the level (volume) of the lower pro gram. For a setting of 99 the volume will be the ful volume as set by the Program parameter.

▼ Lower Panpot determines the output destination of th lower program. Select from A, A:B (9:1 to 1:9), B, C C+D, and D.

- When a drum kit program is selected, the display wi indicate "SND", and the pan settings of DRUM mode will be used. (This setting cannot be mad here.)

▼ When Lower Damper Filter is set to "DIS" (disable), th damper pedal will not affect the lower program.

4A — 4C UPPER PROGRAM / LEVEL / PANPOT / DAMPER FILTER

4A UPPER	4B UPPER	4C UPPER
I01:E.Piano 1	Level=99 Pan=5:5	Damper=ENA

4A		Upper Program	I00 – I99 C00 – C99	The Program which will sound above (or at) the split point
4B	Level	Upper Level	0 – 99	Upper program level adjustment
	Pan	Upper Panpot	A, 9:1–1:9, B, C, C+D, D	Upper program output destination
4C	Damper	Upper Damper Filter	DIS/ENA	Upper program damper disable/enable

▼ Upper Program selects the program which will sound when a key above (or at) the split point is played.

▼ Upper Level sets the level (volume) of the upper program. Details are the same as for Lower Level.

▼ Upper Panpot determines the output destination of the upper program. Details are the same as for Lower Panpot.

▼ Upper Damper Filter: details are the same as for Lower Damper Filter.

Velocity Switch type functions

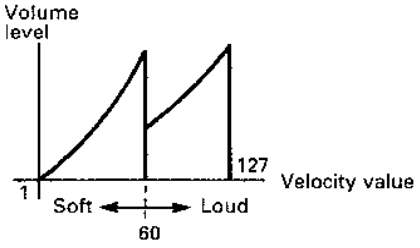
Page		Editing parameter	Page reference
2A	VELOCITY SW POINT	Velocity switch point	40
3A – 3C	SOFT PROG / LEVEL / PANPOT / DAMPER FILTER	Number, output level, output destination (pan), and damper for soft program.	40
4A – 4C	LOUD PROG / LEVEL / PANPOT / DAMPER FILTER	Number, output level, output destination (pan), and damper for loud program.	41

2A VELOCITY SWITCH POINT

```
2A VEL. SW
Point=063
```

2A	Point	Vel. SW Point	2 – 127	Velocity value of velocity switch

▼ Vel. SW Point determines the velocity value which separates the two programs.
Example: a velocity switch point setting of 60



3A — 3C SOFT PROGRAM / LEVEL / PANPOT / DAMPER FILTER

```
3A SOFT
I00:Piano 16'
```

```
3B SOFT
Level=99 Pan=5:5
```

```
3C SOFT
Damper=ENA
```

3A		Soft Program	I00 – I99 C00 – C99	The Program which will sound for notes played softer than the velocity switch point
3B	Level	Soft Level	0 – 99	Level adjustment of soft program
	Pan	Soft Panpot	A, 9:1 – 1:9, B, C, C+D, D	Output destination of soft program
3C	Damper	Soft Damper Filter	DIS/ENA	Disable/enable damper pedal for soft program

▼ Soft Program selects the program which will sound when the velocity value is less than (played softer than) the velocity switch point.

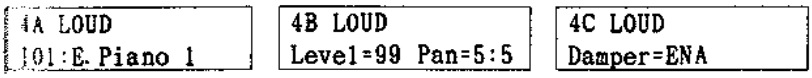
▼ Soft Level determines the level (volume) of the soft program. For a setting of 99 the volume will be the full volume as set by the Program parameter.

▼ Soft Panpot determines the output destination of the soft program. Select from A, A:B (9:1 to 1:9), B, C, C+D, and D.

- When a drum kit program is selected, the display will indicate "SND", and the pan settings of DRUMS mode will be used. (This setting cannot be made here.)

▼ When Soft Damper Filter is set to "DIS" (disable), the damper pedal will not affect the soft program.

4A — 4C LOUD PROGRAM / LEVEL / PANPOT / DAMPER FILTER



4A		Loud Program	I00 – I99 C00 – C99	The Program which will sound for notes played stronger than the velocity switch point
4B	Level	Loud Level	0 – 99	Level adjustment of loud program
	Pan	Loud Panpot	A, 9:1 – 1:9, B, C, C+D, D	Output destination of loud program
4C	Damper	Loud Damper Filter	DIS/ENA	Disable/enable damper pedal for loud program

▼ Loud Program selects the program which will sound when the velocity value is greater (played more strongly) than the velocity switch point.

▼ Loud Level determines the level (volume) of the loud program. Details are the same as for Soft Level.

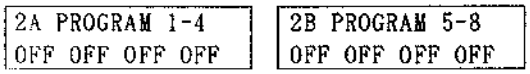
▼ Loud Panpot determines the output destination of the loud program. Details are the same as for Soft Panpot.

▼ Loud Damper Filter: details are the same as for Soft Damper Filter.

Multi type functions

Page		Parameter to edit	Page reference
2A – 2B	PROGRAM SELECT	Program assigned to each timbre Level / pan (output destination)	42
3A – 3B	OUTPUT LEVEL	Output level of each timbre	43
4A – 4B	MIDI-CH	MIDI reception channel of each timbre	43
5A – 5D	KEY WINDOW TOP KEY WINDOW BOTTOM	Top key of each timbre's range Bottom key of each timbre's range	44
6A – 6D	VEL WINDOW TOP VEL WINDOW BOTTOM	Top velocity value of each timbre's velocity switch Bottom velocity value of each timbre's velocity switch	45
7A – 7D	KEY TRANSPOSE DETUNE	Key Transpose setting of each timbre Detune setting of each timbre	45
8A – 8D	MIDI PROG CHG DAMPER FILTER AFTER TOUCH CONTROL CHANGE	Program change receive filter for each timbre Damper receive filter for each timbre Aftertouch receive filter for each timbre Control change receive filter for each timbre	46
9A – 9B	PANPOT	Output destination of each timbre	47

2A — 2B PROGRAM SELECT



2A		Timbre 1 Program	OFF / 100 – 199, C00 – C99	Program selection for each timbre
		Timbre 2 Program	OFF / 100 – 199, C00 – C99	
		Timbre 3 Program	OFF / 100 – 199, C00 – C99	
		Timbre 4 Program	OFF / 100 – 199, C00 – C99	
2B		Timbre 5 Program	OFF / 100 – 199, C00 – C99	
		Timbre 6 Program	OFF / 100 – 199, C00 – C99	
		Timbre 7 Program	OFF / 100 – 199, C00 – C99	
		Timbre 8 Program	OFF / 100 – 199, C00 – C99	

▼ Select the Program used by each Timbre. Timbres set to "OFF" will not sound.

3A — 3B OUTPUT LEVEL

3A LEVEL 1-4	3B LEVEL 5-8
99 99 99	99 99 99 99

3A		Timbre 1 Level	0 – 99	Output level adjustment for each timbre
		Timbre 2 Level	0 – 99	
		Timbre 3 Level	0 – 99	
		Timbre 4 Level	0 – 99	
3B		Timbre 5 Level	0 – 99	
		Timbre 6 Level	0 – 99	
		Timbre 7 Level	0 – 99	
		Timbre 8 Level	0 – 99	

▼ OUTPUT LEVEL adjusts the output level of each timbre. At a setting of 99, the timbre will be at the full volume set by the program parameter. At a setting of 0, that timbre will not sound.

4A — 4B MIDI-CH (MIDI channel)

4A MIDI CH 1-4	4B MIDI CH 5-8
1G 1G 1G	1G 1G 1G 1G

4A		Timbre 1 Channel	1 – 16	MIDI receive channel of each timbre
		Timbre 2 Channel	1 – 16	
		Timbre 3 Channel	1 – 16	
		Timbre 4 Channel	1 – 16	
4B		Timbre 5 Channel	1 – 16	
		Timbre 6 Channel	1 – 16	
		Timbre 7 Channel	1 – 16	
		Timbre 8 Channel	1 – 16	

▼ This determines the MIDI receive channel of each timbre. By setting a different MIDI receive channel for each timbre, multi-channel MIDI data received at MIDI IN can make the M3R play up to 8 sounds independently.

- MIDI program change, pitch bend, aftertouch, and control data will be received on the MIDI channel specified for each timbre. (It is also possible to set [8A] – [8D] so that these messages are not received.)

- When the reception channel specified for the timbre is the same as the global channel (the MIDI channel set in GLOBAL mode that controls the entire M3R), a "G" will be displayed after the channel number.
- Programs will be changed according to the MIDI channel set for each timbre, but when a program change arrives on the global channel, it will select a new combination. If you don't want MIDI program change messages to select a new combination, set the global channel to a MIDI channel not used by a timbre.

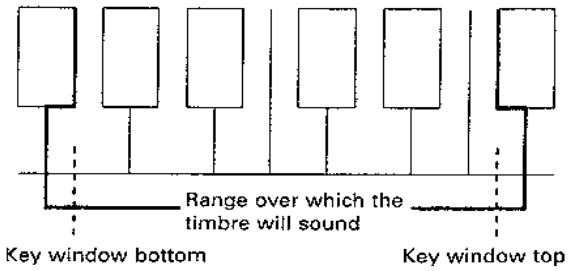
5A — 5D KEY WINDOW TOP / BOTTOM

5A KW TOP 1-4	5B KW TOP 5-8	5C KW BTM 1-4	5D KW BTM 5-8
G9 G9 G9 G9	G9 G9 G9 G9	C-1 C-1 C-1 C-1	C-1 C-1 C-1 C-1

5A		Timbre 1 Top	C–1 – G9	Top key of the range sounded by each timbre
		Timbre 2 Top	C–1 – G9	
		Timbre 3 Top	C–1 – G9	
		Timbre 4 Top	C–1 – G9	
5B		Timbre 5 Top	C–1 – G9	
		Timbre 6 Top	C–1 – G9	
		Timbre 7 Top	C–1 – G9	
		Timbre 8 Top	C–1 – G9	
5C		Timbre 1 Bottom	C–1 – G9	Bottom key of the range sounded by each timbre
		Timbre 2 Bottom	C–1 – G9	
		Timbre 3 Bottom	C–1 – G9	
		Timbre 4 Bottom	C–1 – G9	
5D		Timbre 5 Bottom	C–1 – G9	
		Timbre 6 Bottom	C–1 – G9	
		Timbre 7 Bottom	C–1 – G9	
		Timbre 8 Bottom	C–1 – G9	

▼ Key Window determines the key area (key window) for which a timbre will sound. Notes outside this area will not be sounded by this timbre. This allows you to create a program which will sound different timbres for different areas of the keyboard.

- It is not possible to set a top key lower than the bottom key for a particular timbre. (If you set the top key lower than the bottom key, the bottom key will be adjusted to equal the top key, and vice versa.)



6A — 6D VEL WINDOW TOP / VEL WINDOW BOTTOM

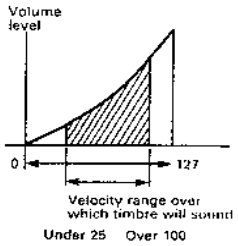
6A VW TOP 1-4	6B VW TOP 5-8	6C VW BTM 1-4	6D VW BTM 5-8
127 127 127	127 127 127 127	001 001 001 001	001 001 001 001

6A		Timbre 1 Top	1 – 127	Top value of velocity range sounded by each timbre
		Timbre 2 Top	1 – 127	
		Timbre 3 Top	1 – 127	
		Timbre 4 Top	1 – 127	
6B		Timbre 5 Top	1 – 127	
		Timbre 6 Top	1 – 127	
		Timbre 7 Top	1 – 127	
		Timbre 8 Top	1 – 127	
6C		Timbre 1 Bottom	1 – 127	Bottom value of velocity range sounded by each timbre
		Timbre 2 Bottom	1 – 127	
		Timbre 3 Bottom	1 – 127	
		Timbre 4 Bottom	1 – 127	
6D		Timbre 5 Bottom	1 – 127	
		Timbre 6 Bottom	1 – 127	
		Timbre 7 Bottom	1 – 127	
		Timbre 8 Bottom	1 – 127	

▼ Velocity Window determines the velocity (playing strength) range for which a timbre will sound. This allows you to create a program which will sound different timbres for notes played with differing velocities.

- It is not possible to set a top value lower than the bottom value.

- Example : velocity window bottom = 25, velocity window top = 100



7A — 7D KEY TRANSPOSE / DETUNE

7A TRANS 1-4	7B TRANS 5-8	7C DETUNE 1-4	7D DETUNE 5-8
+00 +00 +00	+00 +00 +00 +00	+00 +00 +00 +00	+00 +00 +00 +00

7A		Timbre 1 Transpose	–24 – +24	Transpose setting of each timbre in semitones (± 2 octaves)
		Timbre 2 Transpose	–24 – +24	
		Timbre 3 Transpose	–24 – +24	
		Timbre 4 Transpose	–24 – +24	
7B		Timbre 5 Transpose	–24 – +24	
		Timbre 6 Transpose	–24 – +24	
		Timbre 7 Transpose	–24 – +24	
		Timbre 8 Transpose	–24 – +24	
7C		Timbre 1 Detune	–50 – +50	Detune setting of each timbre in 1 cent steps (± 50 cents)
		Timbre 2 Detune	–50 – +50	
		Timbre 3 Detune	–50 – +50	
		Timbre 4 Detune	–50 – +50	
7D		Timbre 5 Detune	–50 – +50	
		Timbre 6 Detune	–50 – +50	
		Timbre 7 Detune	–50 – +50	
		Timbre 8 Detune	–50 – +50	

* Key Transpose adjusts the pitch of each timbre in semitones over a range of -24 to +24 (12 is one octave).

▼ Detune adjusts the pitch of each timbre in fine steps of one cent, over a range of -50 to +50 (100 cents is a semitone).

8A — 8D MIDI FILTER

8A PROG CHANGE	8B DAMPER	8C AFTER TOUCH	8D CONTROL CHG
E E E E E E E E	E E E E E E E E	E E E E E E E E	E E E E E E E E

8A		Timbre 1 Prog change	D/E	Determine whether or not each timbre will receive MIDI program changes ("D" disables reception)
		Timbre 2 Prog change	D/E	
		Timbre 3 Prog change	D/E	
		Timbre 4 Prog change	D/E	
		Timbre 5 Prog change	D/E	
		Timbre 6 Prog change	D/E	
		Timbre 7 Prog change	D/E	
		Timbre 8 Prog change	D/E	
8B		Timbre 1 Damper	D/E	Determine whether or not each timbre will receive MIDI damper pedal ("D" disables reception)
		Timbre 2 Damper	D/E	
		Timbre 3 Damper	D/E	
		Timbre 4 Damper	D/E	
		Timbre 5 Damper	D/E	
		Timbre 6 Damper	D/E	
		Timbre 7 Damper	D/E	
		Timbre 8 Damper	D/E	
8C		Timbre 1 After Touch	D/E	Determine whether or not each timbre will receive MIDI aftertouch ("D" disables reception)
		Timbre 2 After Touch	D/E	
		Timbre 3 After Touch	D/E	
		Timbre 4 After Touch	D/E	
		Timbre 5 After Touch	D/E	
		Timbre 6 After Touch	D/E	
		Timbre 7 After Touch	D/E	
		Timbre 8 After Touch	D/E	
8D		Timbre 1 Control CHG	D/E	Determine whether or not each timbre will receive MIDI control changes ("D" disables reception)
		Timbre 2 Control CHG	D/E	
		Timbre 3 Control CHG	D/E	
		Timbre 4 Control CHG	D/E	
		Timbre 5 Control CHG	D/E	
		Timbre 6 Control CHG	D/E	
		Timbre 7 Control CHG	D/E	
		Timbre 8 Control CHG	D/E	

▼ Timbres whose MIDI Prog Change is set to "D" will not switch programs when a MIDI program change is received.

- If a program change is received on the global channel, the Combination will change regardless of this setting.

▼ Timbres whose Damper is set to "D" will not be affected by the damper pedal.

▼ Timbres whose Aftertouch is set to "D" will not be affected by aftertouch.

▼ Timbres whose Control Change is set to "D" will not be affected by control changes (bender, pitch modulation, VDF modulation, volume).

— 9B PANPOT

PANPOT 1-4
5:5 5:5 5:5

9B PANPOT 5-8
5:5 5:5 5:5 5:5

	Timbre 1 Panpot	A, 9:1–1:9, B, C, C+D, D	Output destination for each timbre
	Timbre 2 Panpot	A, 9:1–1:9, B, C, C+D, D	
	Timbre 3 Panpot	A, 9:1–1:9, B, C, C+D, D	
	Timbre 4 Panpot	A, 9:1–1:9, B, C, C+D, D	
	Timbre 5 Panpot	A, 9:1–1:9, B, C, C+D, D	
	Timbre 6 Panpot	A, 9:1–1:9, B, C, C+D, D	
	Timbre 7 Panpot	A, 9:1–1:9, B, C, C+D, D	
	Timbre 8 Panpot	A, 9:1–1:9, B, C, C+D, D	

- Panpot assigns the output of each timbre to outputs A – D. Select the output for each timbre from A, A:B (9:1 – 1:9), B, C, C+D, D.

- If a drum kit program is assigned, the display will show "SND", and the pan settings of DRUMS mode will be used. (This setting cannot be made here.)

4. EFFECT MODE

To enter this mode

			②
①			

①②=press the keys in this order.

Key functions

PLAY	PAGE+	▷	△/YES
EDIT	PAGE−	◁	▽/NO

= Keys whose indicators light when in this mode

The **M3R** has two built-in digital effects devices, each with two outputs. Each effects device can produce effects such as reverb, delay, chorus, flanger, phase shifter, distortion, exciter, etc. Individual parameters can also be adjusted for each effect.
Effect settings can also be made for each combination.

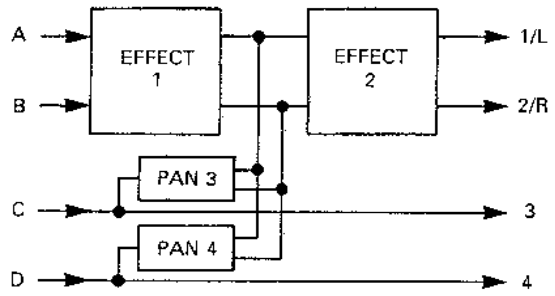
- Since each combination has its own effect settings, effects settings will change when you select a different combination.
- It is also possible to make settings so that a different effect is used only by a specific sound in a combination or drum kit program.

The effects section consists of four inputs (A, B, C, D), and outputs (1/L, 2/R, 3, 4), with two effects and two panpots. The two effects can be placed in series or in parallel. Signals are converted from digital to analog only after passing through the effects section.

- If the GLOBAL mode Page Memory function is On, the parameter you last selected before exiting this mode will automatically appear.
- In this mode, you will always hear the sound with the effect applied, even if the GLOBAL mode Effect Interlock function is Off.

Effect placement

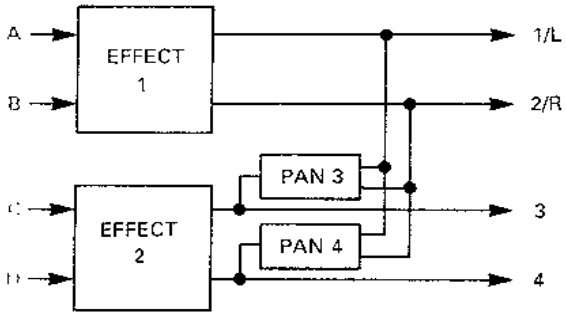
Serial placement



When the two effects are placed in series, inputs A and B will be processed through effect 1 and effect 2, and sent from outputs 1/L and 2/R. Outputs 3 and 4 carry the unmodified signal from C and D. The output signals 3 and 4 can also be assigned to the two inputs of effect 2.

☆ It is possible to use inputs C and D so that only specified programs are processed through effect 1, while all programs are processed through effect 2.

Parallel placement



When the two effects are placed in parallel, inputs A, B and C, D will be processed through different effects, and sent from outputs 1/L, 2/R and 3, 4. The outputs 3, 4 can also be mixed into the outputs 1/L, 2/R.

There are two types of effect; stereo effects (1–25) and dual effects in which each channel has a different effect (26–33).

The input to A–D is determined by the pan settings in COMBINATION EDIT mode. However if a drum kit is used, the settings made in DRUMS mode will have priority.

Output 3 pan and output 4 pan can be used in the following ways;

- When different sounds are input at C and D, output 3 pan and output 4 pan can mix these sounds into the stereo output.
- When effects are placed in parallel and stereo-type effects are selected for effects 1/2, by sending output 3 to L and output 4 to R, you can get a stereo mix of effects 1 and 2.
- If an external mixer or effects device is connected, you can set output 3 pan and output 4 pan to "OFF", and use outputs 3/4 as separate outputs.

0C EFFECT 1

	EFFECT TYPE	01 – 33 34:No Effect	Select the type of effect No effect is used
	SWITCH	OFF / ON	Effect ON/OFF
	DRY:EFF Balance	DRY, 99:1 – 1:99, EFF	The output balance of the direct sound and processed sound.
	DRY:EFF Balance	DRY, 99:1 – 1:99, EFF	The output balance of the direct sound and the processed sound (used for types 26 and above)

Select the type of effect.

When you select the effect type, the effect parameters will be set to their initial setting (see page 67).

If dual-type effect #24 Symphonic Ensemble or #25 Rotary Speaker has been selected for one of the two internal effects devices, there will be some effect types which cannot be selected for the other effects device. The effect number of "–" will be displayed for such effect types. If these effect types are already selected for one effects device, effect types 24 and 25 cannot be selected for the other effects device. (See page 67.)

▼ When you select a combination, settings will be set to match the effect parameter settings of that combination.

☆ For effects other than Reverb (01–06), Early Reflection (07–09), Overdrive (21, 22), and Ensemble (24), the equalizer settings (LOW EQ and HIGH EQ) will be effective even when the effect switch is "OFF".
To turn off an effect including its equalizer settings (for example while editing a sound), select "34:No Effect" as the effect type.

1A – 1C EFFECT 1 PARAMETERS

■ These set the parameters for effect 1.
- Parameter details will differ according to the parame ter type. Refer to the explanation of parameter types
- These settings will be initialized whenever the effect type of effect 1 is changed.

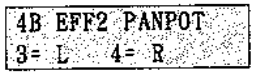
2A — 2C EFFECT 2

▼ Select the effect type for effect 2.
- Details are the same as [0A] – [0C] EFFECT 1.

3A – 3C EFFECT 2 PARAMETERS

▼ These set the parameters for effect 2.
- Details are the same as for [1A] – [1D] EFFECT 1 PARAMETERS.

4A – 4B EFFECT PLACEMENT



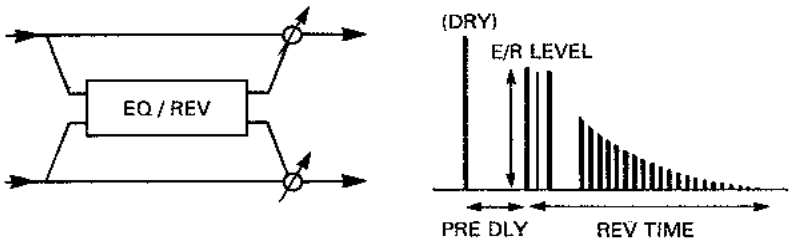
4A		Effect Placement	Parallel Serial	Select effect placement Effects placed in parallel Effects placed in series
4B	3	Out3 Panpot	OFF, R, 01:99 – 99:01, L	Output 3 pan is not used (OFF), output 3 pan setting (L:R)
	4	Out4 Panpot	OFF, R, 01:99 – 99:01, L	Output 4 pan is not used (OFF), output 4 pan setting (L:R)

▼ These parameters determine how the two effects devices are placed. and the pan setting of outputs 3 and 4.

Parameters 1A — 1D, 3A — 3D will differ according to the effect type. Refer to the explanation for the selected type of effect. The displays show the initial settings for each type of effect.

Reverb group

These effects simulate reverberation, adding ambience to a sound.



1. HALL

The effect of a natural-sounding hall.

2. ENSEMBLE HALL

Hall-type reverb suitable for an ensemble of string or brass sounds.

3. CONCERT HALL

The ambience of a fairly large hall, with emphasis on the early reflections.

4. ROOM

The ambience of a fairly small room.

5. LARGE ROOM

Room-type reverb with emphasis on the sound density. Setting a REVERB TIME of 0.5 seconds will produce a gated-type effect.

6. LIVE STAGE

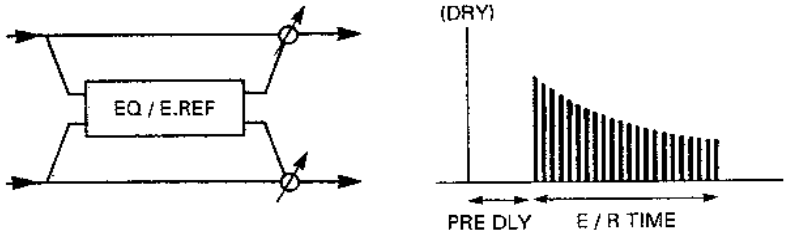
The reverberation characteristic of a fairly large room.

1A Hall Time3.5s H.Dmp40	1B Hall P.Dly055ms E/R46	1C Hall EQ.L-05dB H+00dB

1A 4A	Time	Reverb Time	0.2 – 9.9 [sec] (HALL-type) 0.2 – 4.9 [sec] (ROOM -type)	Time required for reverberation to decay
	H.Dmp	High Damp	0 – 99 [%]	Higher settings will result in more rapid high-frequency damping
1B 4B	P.Dly	Pre-delay	0 – 200 [ms]	Time delay between the direct sound and the first reverberant sound
	E/R	Early Ref	0 – 99	Level of early reflections
1C 4C	EQ.L	EQ Low	–12 – +12 [dB]	Low frequency cut or boost
	H	EQ High	–12 – +12 [dB]	High frequency cut or boost

Early Reflection group

Early reflections are the acoustic reflections that precede the reverberant "wash", and are an important psychoacoustic cue in determining the shape and size of the reverberant space. Adjusting the E/R time lets you achieve a wide range of effects, such as thickening the sound, or adding echo-like reflections.



7. EARLY REFLECTION I

This is effective for strengthening the low frequency range, or as a general- purpose gating effect for drums.

8. EARLY REFLECTION II

The early reflection time affects the level in a different way than E/R I, and provides an effect useful on various sounds.

9. EARLY REFLECTION III

This has an early reflection envelope that is the reverse of E/R I and E/R II. When used on sounds with a pronounced attack, such as cymbals, it provides a reverse effect.

1A Early Ref 1 Time170ms D030ms	1B Early Ref 1 EQ. L+00dB H+00dB

1A 3A	Time	E/R Time	100 – 800 [mS]	Early reflection time
	D	Pre Delay	2 – 200 [mS]	Time delay between the direct sound and the first early reflection
1B 3B	EQ.L	EQ Low	–12 – +12 [dB]	Low frequency cut or boost
	H	EQ High	–12 – +12 [dB]	High frequency cut or boost

Delay group

These effects can be given independent delay times for L and R outputs, for a stereo delay. The high damp setting can be used to damp the high frequencies, creating a more natural simulation of actual acoustic decay.

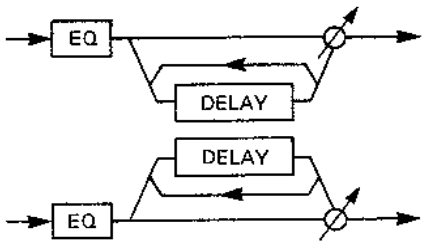
10. STEREO DELAY

This stereo effect consists of two delays. Parameters other than delay time are common to both delays.

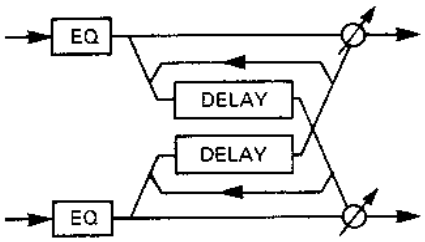
11. CROSS DELAY

A stereo delay in which the delayed signal of each delay crosses over and is fed back to the other delay.

- STEREO DELAY



- CROSS DELAY



1A Stereo DLY DT L250ms R260ms	1B Stereo DLY FB+50 H. Dmp10	1C Stereo DLY EQ. L+00dB H+00dB

1A 3A	DT L	Delay Time Left	0 – 500 [mS]	Delay between direct and processed sound of the left channel (input A or C)
	R	Delay Time Right	0 – 500 [mS]	Delay between direct and processed sound of the right channel (input B or D)
1B 3B	FB	Feedback	–99 – +99 [%]	Amount of feedback (negative settings produce inverted phase)
	H.Dmp	High Damp	0 – 99 [%]	Higher settings result in more rapid high frequency damping
1C 3C	EQ.L	EQ Low	–12 – +12 [dB]	Low frequency cut or boost
	H	EQ High	–12 – +12 [dB]	High frequency cut or boost

Chorus group

These stereo effects combine two chorus circuits, to provide natural spaciousness and depth for piano, strings, brass, or any other sound.

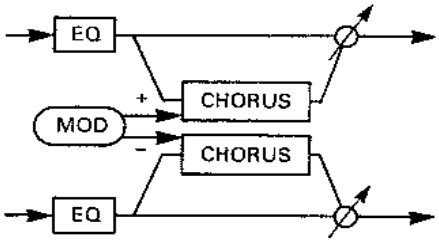
12. STEREO CHORUS I

Modulation is applied to two chorus units so that they are in reversed phase, resulting in an effect of swirling stereo movement.

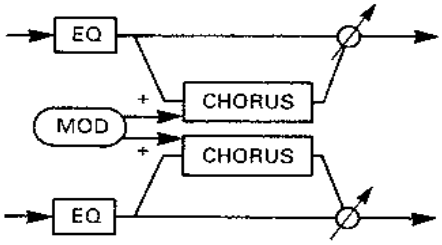
13. STEREO CHORUS II

Modulation of the same phase is applied to the two chorus circuits.

- STEREO CHORUS I



- STEREO CHORUS II



1A Chorus 1 Mod60 0.30Hz TRI	1B Chorus 1 Time010ms	1C Chorus 1 EQ.L+00dB H+00dB

1A 3A	Mod	Mod Depth	0 – 99	Modulation depth
		Mod Speed	0.03 – 30[Hz]	Modulation speed (frequency)
		Mod Waveform	SIN TRI	Modulation waveform Sine wave ∿ Triangle wave ⩘
1B 3B	Time	Delay Time	0 – 200[mS]	Delay between direct sound and processed sound
1C 3C	EQ.L	EQ Low	–12 – +12[dB]	Low frequency cut or boost
	H	EQ High	–12 – +12[dB]	High frequency cut or boost

Flanger group

This adds feedback to the chorus effect. When used on sounds that have many harmonics, such as cymbals, it adds a swirling sound with a feeling of pitched tone color.

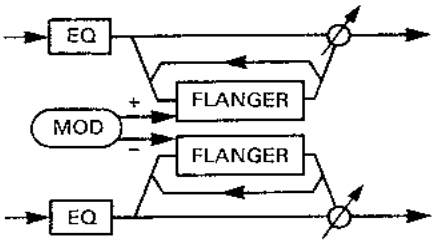
14. STEREO FLANGER

This stereo effect uses two flanging circuits, modulated to be in opposite phase for a swirling stereo movement.

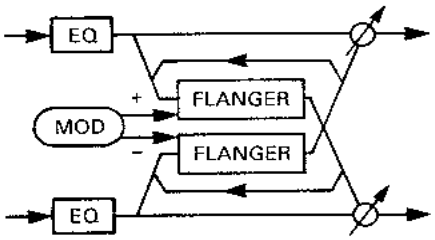
15. CROSS FLANGER

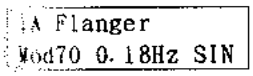
This is an effect which is used to cross-feed the feedback of two flanger blocks to each other.

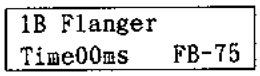
- STEREO FLANGER

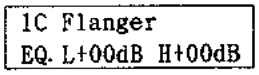


- CROSS FLANGER









1A 1A	Mod	Mod Depth	0 – 99	Depth of flanging effect
		Mod Speed	0.03 – 30[Hz]	Modulation speed (frequency)
		Mod Waveform	SIN TRI	Modulation waveform Sine wave Triangle wave
1B 1B	Time	Delay Time	0 – 50[mS]	Delay between direct sound and processed sound
	FB	Feedback	–99 – +99[%]	Amount of feedback (negative settings produce inverted phase)
1C 1C	EQ.L	EQ Low	–12 – +12[dB]	Low frequency cut or boost
	H	EQ High	–12 – +12[dB]	High frequency cut or boost

Phase Shifter group

In contrast to the chorus and flanger, which modulate the time delay to create a swirling effect, a phaser modulates the phase of the input signal to produce an effect differing from chorus or flanging. It is especially effective when used on electric piano or guitar sounds.

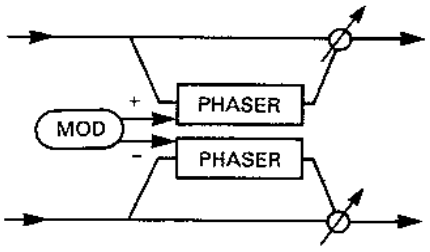
16. PHASER I

This stereo effect uses two phaser circuits, modulated in opposite phase to produce a swirling effect of stereo movement.

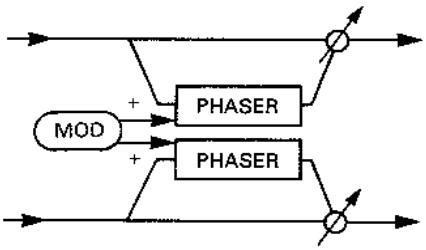
17. PHASER II

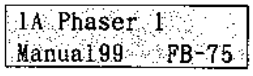
The two phaser circuits are modulated in phase.

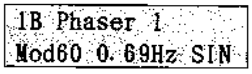
- PHASER I



- PHASER II







1A 3A	Manual	Manual	0 – 99	Center frequency affected by the phase shift
	FB	Feedback	–99 – +99[%]	Amount of feedback (negative settings produce inverted phase)
1B 3B	Mod	Mod Depth	0 – 99	Depth of phase shift effect
		Mod Speed	0.03 – 30[Hz]	Modulation speed (frequency)
		Mod Waveform	SIN TRI	Modulation waveform Sine wave Triangle wave

Tremolo group

This effect periodically varies the volume.

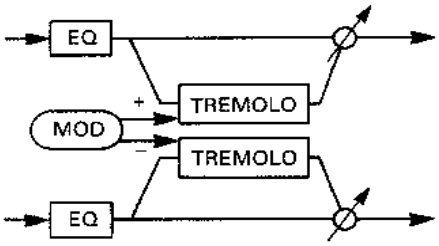
18. STEREO TREMOLO I

This stereo effect uses two tremolo circuits, modulated in reverse phase to produce an effect of stereo panning.

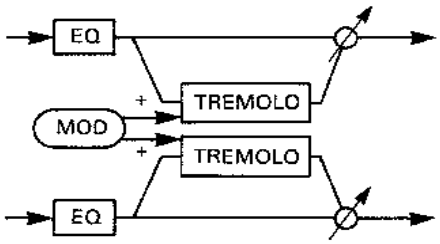
19. STEREO TREMOLO II

In contrast to the above Stereo Tremolo I, this effect modulates the two tremolo circuits in phase.

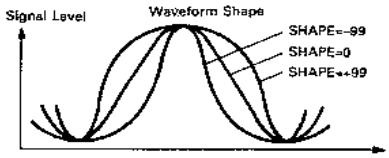
- STEREO TREMOLO I

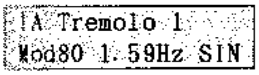


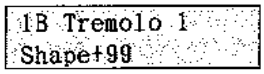
- STEREO TREMOLO II

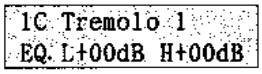


- Shape







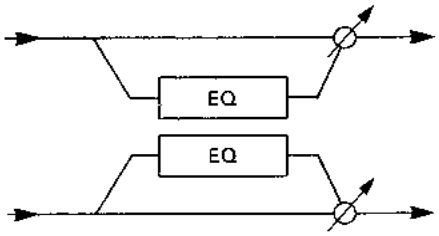


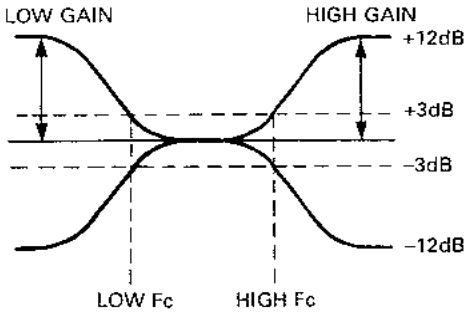
1A 3A	Mod	Mod Depth	0 – 99	Depth of tremolo effect
		Mod Speed	0.03 – 30[Hz]	Modulation speed (frequency)
		Mod Waveform	SIN TRI	Modulation waveform Sine wave Triangle wave
1B 3B	Shape	Shape	–99 – +99	Modify the shape of the modulation waveform
1C 3C	EQ L	EQ Low	–12 – +12[dB]	Low frequency cut or boost
	H	EQ High	–12 – +12[dB]	High frequency cut or boost

Equalizer group

20. EQUALIZER

This is a two-band equalizer with adjustable cutoff frequency and gain for high and low bands.





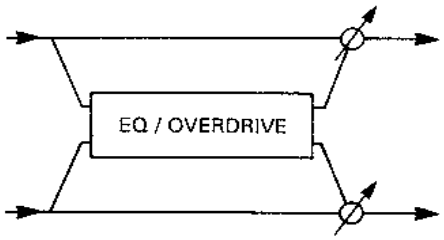
1A Equalizer Low+00dB 500Hz	1B Equalizer High+00dB 2KHz

1A 3A	Low	Low Gain	-12 - +12[dB]	Cut or boost for low frequency band
		Low Fc	250/500/1K[Hz]	Cutoff frequency for low frequency band
1B 3B	High	High Gain	-12 - +12[dB]	Cut or boost for high frequency band
		High Fc	1K/2K/4K[Hz]	Cutoff frequency for high frequency band

Overdrive group

21. OVER DRIVE

This effect simulates the overdrive often used by electric guitars. It is especially effective when playing guitar-like lines and solos, or rock organ sounds.

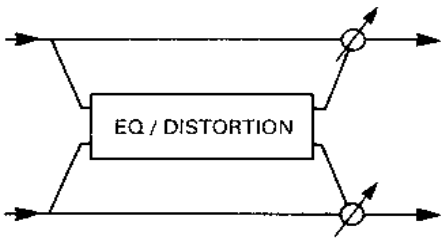


1A Over Drive Drive080 Lev015	1B Over Drive EQ. L+00dB H+00dB

1A 3A	Drive	Drive	0 – 100	Overdrive of input signal
	Lev	Level	0 – 100	Output level of processed sound
1B 3B	EQ.L	EQ Low	–12 – +12[dB]	Low frequency range cut or boost
	H	EQ High	–12 – +12[dB]	High frequency range cut or boost

22. DISTORTION

This has a more distorted sound than overdrive, and simulates a fuzz-type distortion device. It is especially effective for solos.



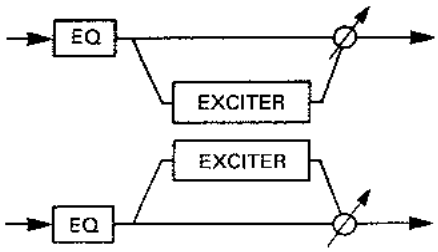
1A Distortion Dist080 Lev020	1B Distortion EQ. Low+00dB

1A 3A	Dist	Distortion	0 – 100	Distortion of input signal
	Lev	Level	0 – 100	Output level of processed sound
1B 3B	EQ.Low	EQ Low	–12 – +12[dB]	Low frequency range cut or boost

Exciter group

23. EXCITER

This effect increases the clarity of the sound, gives it greater definition and presence, and helps bring the sound to the forefront.



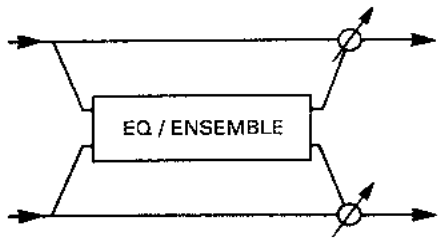
1A Exciter Blend+99 Point05	1B Exciter EQ L+00dB H+00dB

1A 3A	Blend	Blend	–99 – +99	Depth of the exciter effect
	Point	Emphatic Point	1 – 10	Center frequency to which exciter effect is applied
1B 3B	EQ.L	EQ Low	–12 – +12[dB]	Low frequency range cut or boost
	H	EQ High	–12 – +12[dB]	High frequency range cut or boost

Ensemble group

24. SYMPHONIC ENSEMBLE

This effect uses multi-level chorusing, and is especially effective for string ensemble sounds.



1A Sympho Ens Mod80	1B Sympho Ens EQ L+00dB H+00dB

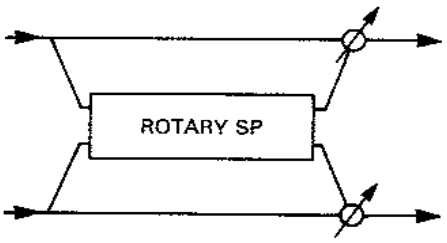
1A 3A	Mod	Mod Depth	0 – 99	Depth of the ensemble effect
1B 3B	EQ.L	EQ Low	–12 – +12[dB]	Low frequency cut or boost
	H	EQ High	–12 – +12[dB]	High frequency cut or boost

Rotary effect group

25. ROTARY SPEAKER

This simulates the effect of a rotary speaker often used with electric organs, and is very effective when used on organ sounds. The rotational speed of the speaker can be controlled using a MIDI control change (Bn.50.dd).

* In this case the control change acts as a switch (dd= 0–3Fh:slow, 40h–7Fh:fast), and the speed has no relation to how fast the MIDI data changes. (Even if you advance the pedal slowly, this will not affect how the speed changes.)
* The volume pedal control for the **M1/M1R** rotary effect is not transmitted via MIDI.



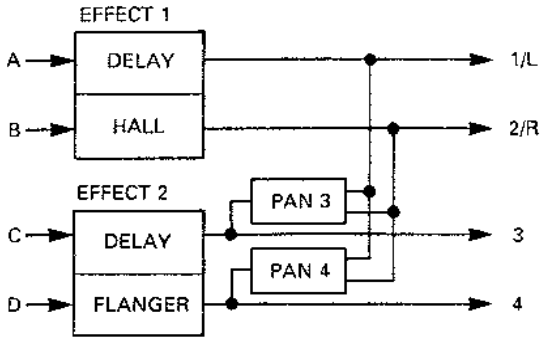
1A Rotary SP Mod62 FAST	1B Rotary SP Ratio+05

1A 3A	Mod	Mod Depth	0 – 99	Depth of the effect
		Speed	Slow/Fast	Rotation speed of the low frequency speaker
1B 3B	Ratio	Speed Ratio	–20 – +20	Ratio of the high frequency speaker rotation speed in relation to the low frequency speaker rotation speed

Combination type effect group

Effect types 26 through 33 are combinations in which two different effects are available on one effect generator. This allows you to use each of effects 1/2 as two independent effects.

- **Example:** Parallel placement with 26: DELAY/HALL selected for effect 1, and 31: DELAY/FLANGER selected for effect 2.



- Consult the explanations for 1 to 19 for details of each effect.
- Effect balance is set by [0B] for the (L) effect and by [0C] for the (R) effect.
- Parameters [1A], [1B] ([3A], [3B]) apply to the (L) effect. Parameters [1C], [1D] ([3C], [3D]) apply to the (R) effect.

26. DELAY / HALL

1A Delay(L) Time250ms FB+50	1B Delay(L) H. Dmp10	1C Hall(R) Time3. 5s H. Dmp40	1D Hall(R) P. Dly055ms

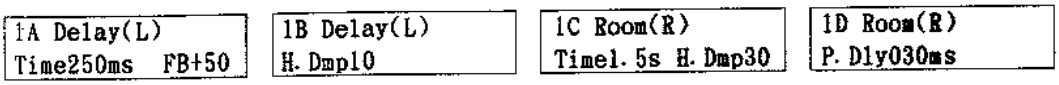
DELAY

1A 3A	Time	Delay Time	0 – 500 [mS]	Time between direct sound and delayed sound
	FB	Feedback	–99 – +99 [%]	Amount of feedback (negative settings produce inverted phase)
1B 3B	H.Dmp	High Damp	–0 – +99 [%]	Higher settings make the high frequencies decay faster

HALL

1C 3C	Time	Reverb Time	0.2 – 9.9 [sec]	Time required for reverb to decay
	H.Dmp	High Damp	0 – 99 [%]	Higher settings make the high frequencies decay faster
1D 3D	P.Dly	Pre Delay	0 – 150 [mS]	Time delay between direct sound and reverberant sound

27. DELAY / ROOM



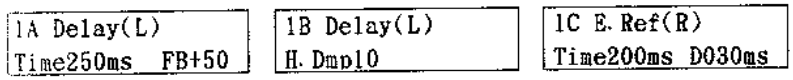
DELAY

1A 3A	Time	Delay Time	0 – 500 [mS]	Time between direct sound and delayed sound
	FB	Feedback	–99 – +99 [%]	Amount of feedback (negative settings produce inverted phase)
1B 3B	H.Dmp	High Damp	0 – 99 [%]	Higher settings make the high frequencies decay faster

ROOM

1C 3C	Time	Reverb Time	0.2 – 4.9 [sec]	Time required for reverb to decay
	H.Dmp	High Damp	0 – 99 [%]	Higher settings make the high frequencies decay faster
1D 3D	P.Dly	Pre Delay	0 – 150 [mS]	Time delay between direct sound and reverberant sound

28. DELAY / EARLY REFLECTION



DELAY

1A 3A	Time	Delay Time	0 – 500 [mS]	Time between direct sound and delayed sound
	FB	Feedback	–99 – +99 [%]	Amount of feedback (negative settings produce inverted phase)

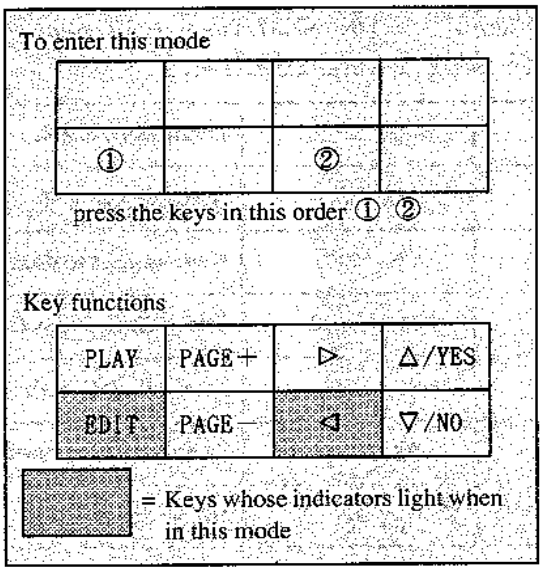
5. DRUMS MODE



In this mode you will make settings for drum kits 1 – 4. To make settings for drum kits C1 – C4 (PROG card), you must first use GLOBAL mode [5A] to load the data from card into internal memory. The sound you will hear in this mode is determined by the settings of the program last selected in Program Edit mode. Before you enter this mode, use Program Edit mode to select the program which uses the Drum Kit you want to edit. If you enter this mode when an ordinary program is selected, the drum sounds may be somewhat unnatural.

- Settings made in this mode will be remembered even when the power is turned off. There is no need to write them into memory.

Functions in DRUMS mode

- When you first enter DRUMS mode, [0A] DRUM KIT 1 will be selected if the Page Memory function is Off. If the Page Memory function is On, you will jump to the parameter that was selected when you last exited this mode Use the PAGE + and PAGE – keys to select the drum kit you wish to edit.
- If the Effect Interlock function is Off, the effect will not be heard in this mode. If On, the effect will be heard. If pan has been set to C, C+D, or D, and effect interlock is On. there will be no sound from 1/L, 2/R, or the PHONES OUT unless the effect placement setting for output 3/4 has been turned On.

Page		Editing parameter	Page reference
0A – 0C	DRUM KIT1	Index, instrument, key, tune, level, decay, and pan for drum kit 1	70
1A – 1C	DRUM KIT2	Index, instrument, key, tune, level, decay, and pan for drum kit 2	71
2A – 2C	DRUM KIT3	Index, instrument, key, tune, level, decay, and pan for drum kit 3	71
3A – 3C	DRUM KIT4	Index, instrument, key, tune, level, decay, and pan for drum kit 4	71

0A — 0C DRUM KIT 1

0A DRUM1 #00 08:Tom	0B KEY/TUNE/L C0 T+000 L+00	0C DECAY/PAN Decay+00 Pan= A

0A	#	Index	0 – 29	Drum index to edit
		Inst	- - -, 01–45	Select drum sound
0B		Key	C0 – G8	Key assigned to drum sound
	T	Tune	–120 – +120	Pitch adjustment within ±1 octave
	L	Level	–99 – +99	Level adjustment for each sound
0C	Decay	Decay	–99 – +99	Decay time adjustment for each sound
	Pan	Pan	A, 9:1 – 1:9, B, C, C + D, D	Output selection

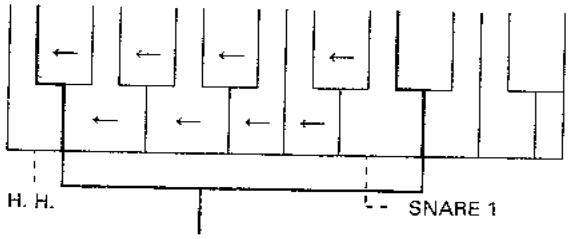
* This is where you edit the drum kit used as a sound source by a drum-type Program. Up to 30 types of drum index can be assigned to each of 4 drum kits (1–4). (An index is a reference number for each drum or percussion sound in a drum kit.)

▼ Index: This is where you select the drum index to edit.
- An index for which no drum sound is assigned will be indicated by the display "No Assign". (When assigning a new sound, select an index which displays "No Assign".)

▼ Inst is where you select the drum sound used by that index. (The back cover has a list of the drum sounds.)
- If an optional PCM card containing drum sounds has been inserted, card sounds can also be selected using the △/YES and ▽/NO keys. (When playing programs which use PCM card drum sounds, be sure that the appropriate card is inserted.)
- Select "No Assign" for each index which you don't need to assign, and set key ([0B]) to an unused key.

▼ Key determines the key (C0–G8) assigned to that index. (The note name for an octave setting of 8' will be displayed.)
- You will not be able to select keys which have already been assigned to another index.
- Keys which have not been assigned to an index are automatically assigned to the index of the following key. (However the pitch will change according to the scale.)
- By using more than one index, you can assign a single sound to be played by more than one key at the same pitch.

Example:



These notes will play SNARE 1 (at different pitches)

▼ Tune, Level, and Decay are parameters which determine the pitch, volume, and VDA decay time for each drum index.
- When the corresponding program parameter is modified, the volume etc. of the entire drum kit will be affected.
- Other program parameters will also affect the entire drum kit.

▼ Tune adjusts the pitch of an assigned key over a range of –120 – +120 (in steps of 10 cents, ±1 octave).

▼ Level is an adjustment relative to the oscillator level setting in PROGRAM mode, over a range of –99 – +99.

▼ Decay is an adjustment relative to the VDA EG decay setting in PROGRAM mode, over a range of –99 – +99.

[1A] – [3C] DRUM KIT 2–4

Details are the same as for [0A] – [0C] DRUM KIT 1.

▼ Pan specifies the output: A, A:B (9:1 – 1:9), B, C, C+D, D.

* When effect inter lock is Off, you will not be able to monitor C, C+D, or D through headphones.

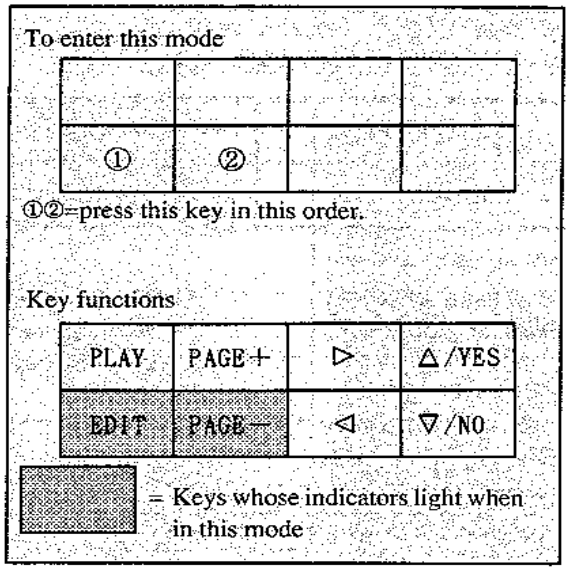
6. GLOBAL MODE



In global mode you can make settings for parameters which affect the entire M3R (overall tunings and MIDI settings).

- With the exception of some MIDI parameters, the settings made in this mode are remembered even when the power is turned off. There is no need to write them into memory.

Functions in GLOBAL mode

- If the Page Memory function is On when you enter GLOBAL mode, you will jump to the parameter that was selected when you last exited GLOBAL mode. If the Page Memory function is OFF, [0A] MASTER TUNE will be selected. Use the PAGE + and PAGE – keys to select the page that contains the parameters you wish to edit.

Page		Editing parameter	Page reference
0A	MASTER TUNE/ KEY TRANSPOSE	Overall pitch adjustment Overall transpose	74
1A – 1B 1B – 1E	SCALE TYPE (USER SCALE)	Select type of scale (equal tempered, just, etc.) (User scale settings)	75
2A – 2C	MIDI GLOBAL/ FILTERING	Settings for MIDI global channel, MIDI overflow Transmission/reception switch for various MIDI messages	76
3A – 3B	MEMORY PROTECT	Protection ON/OFF for writing into parameter memory	76
3C	EFFECT INTERLOCK	Effect Interlock function setting	
3D	PAGE MEMORY	Page Memory function setting	
4A	MIDI DATA DUMP	Transmit various parameters as a MIDI system exclusive message	77
5A – 5D	LOAD FROM CARD/ SAVE TO CARD/ FORMAT CARD PRESET DATA LOAD	Load preset data	78

GLOBAL

0A MASTER TUNE / KEY TRANSPOSE

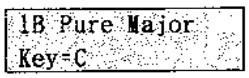
0A	Tune	Master Tune	–50 – +50	Overall tuning of the M3R (steps of 1 cent)
	Trans	Key Transpose	–12 – +12	Overall transposition of the M3R (chromatic steps)

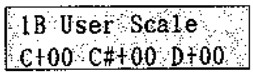
▼ Master Tune adjusts the tuning of the entire M3R over a range of ±50 cents. Use this when tuning the M3R to other instruments.

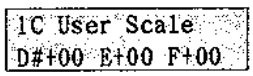
▼ Key Transpose adjusts the pitch of the entire M3R over a range of ±1 octave, in chromatic steps. This can be used to play songs of a difficult key signature in an easier key.

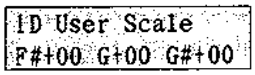
• When the GLOBAL mode setting 2A overflow is "ON", note on/off messages sent from MIDI OUT will be transposed to match this setting.

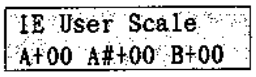
1A — 1E SCALE TYPE











1A		Equal Temp		Equal temperament
		Equal Temp 2		Equal temperament with a randomized pitch for each note
		Pure Major		Just intonation for the major scale
		Pure Minor		Just intonation for the minor scale
		User Scale		A scale of pitches set by the user
1B	Key	Key	C – B	Tonic for the just intonation scale

1B	C	C	–50 – +50	User scale, specified as pitch deviation (in cents) from equal temperament for each note
	C#	C#	–50 – +50	
	D	D	–50 – +50	
1C	D#	D#	–50 – +50	
	E	E	–50 – +50	
	F	F	–50 – +50	
1D	F#	F#	–50 – +50	
	G	G	–50 – +50	
	G#	G#	–50 – +50	
1E	A	A	–50 – +50	
	A#	A#	–50 – +50	
	B	B	–50 – +50	

* This is where you select a scale (temperament). The specified scale type will apply to all voices.

▼ Equal Temp.: This temperament is widely used in keyboard instruments, since chords will sound the same at any transposition.

▼ Equal Temp.2: Each time you play a note, the pitch will randomly deviate from equal temperament. This is useful when simulating instruments that have a somewhat unstable pitch.

▼ Pure Major: Just intonation temperaments are designed so that chords played in the key of the tonic will sound good. Select a tonic of C–B in [1B].

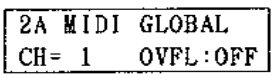
▼ Pure Minor: Select a tonic of C–B in [1B].

▼ User scale: For each note of the equal tempered scale, you can specify an offset of ±50 cents to create your own scale. This can be used to play unique temperaments other than the preset temperaments. Use [1B] – [1E] to specify the scale degree.

- Even if [0A] key transpose is used, the "Pure Major, Pure Minor, User Scale" settings will define the pitch which is actually sounded.

Example: If the User Scale defines C as +10 and Transpose is set to +1, when a MIDI note of C arrives, C# will be sounded, and when a MIDI note of B arrives, C+10 cents will be sounded.

2A — 2C MIDI GLOBAL / FILTER



2A	CH	Channel	1 – 16	Channel on which musical data will be received
	OVFL	Overflow	OFF/ON	MIDI overflow switch
2B	PRG	Combination/Program Change Filter	DIS/ENA	When "DIS" is selected, the corresponding type of MIDI data will neither be transmitted nor received.
	AFT	After Touch Filter	DIS/ENA	
2C	CTRL	Control Change Filter	DIS/ENA	
	EX	Exclusive Filter	DIS/ENA	

▼ Channel determines the MIDI transmission/reception channel.
- In COMBINATION mode when type is set to Multi, MIDI data arriving on channels other than the channel specified here may be received.

▼ When Overflow is set "ON", incoming MIDI data which exceeds the maximum simultaneous note capacity will be re-transmitted from MIDI OUT. If you have connected another M3R to MIDI OUT, this allows you to increase the simultaneous note capacity.
- Be sure that both M3Rs are set to the same program/combination.
- If MIDI OUT is connected to a device other than another M3R, set this "OFF".
- When the power is turned on, this setting will be "OFF".
- When this setting is On, data received at MIDI IN (program change, aftertouch, control change, etc.) will always be transmitted from MIDI OUT.

* [2B] – [2C] allow you to disable (filter) reception and transmission of specified types of MIDI data.

▼ When Combination / Program Change is set to "DIS", combination (program) changes will neither be transmitted nor received.

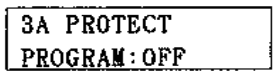
▼ When Control Change is set to "DIS", control change messages (damper, modulation 1 and 2, pitch bender, volume, rotary speaker speed) will neither be transmitted nor received.

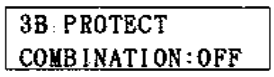
▼ When After Touch is set to "DIS", aftertouch data will not be received.

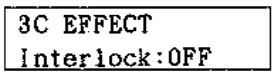
▼ When Exclusive is set to "DIS", system exclusive messages for parameter changes or data will neither be transmitted nor received.

☆ System exclusive parameter changes are used by personal computer voice editing programs.
When two M3Rs are connected and Exclusive is set to "ENA", you can simultaneously edit the voice data of both units.
- When the M3R is connected to other types of MIDI devices, set this to "DIS".

3A — 3D MEMORY PROTECT /EFFECT INTERLOCK / PAGE MEMORY







3A	PROGRAM	Program	OFF/INT/CARD/ ALL	Memory protect (write protection) for internal and card programs
3B	COMBINATION	Combination	OFF/INT/CARD/ ALL	Memory protect (write protection) for internal and card combinations
3C	INTERLOCK	EFFECT Interlock	OFF/ON	Enables/disables Effect Interlock (see below)
3D		Page Memory	OFF/ON	Enables/disables Page Memory (see below)

* These settings prohibit writing data into internal memory or RAM card.

▼ "INT" prohibits writing data into internal memory. "CARD" prohibits writing data into a RAM card. "ALL" prohibits both.
  • The protect switch on the upper part of a RAM card also lets you prohibit writing.

▼ When Effect Interlock is On, the last selected effect will be applied in all modes. When Off, the effect will be not be heard in PROG EDIT and DRUMS modes. When this is Off, a drum sound whose pan has been set to C, C+D, or D will not be heard through headphones.

▼ When Page Memory is On, the Page Memory function will operate. When entering a mode, this function allows you to automatically jump to the page (parameter) that was last selected when you exited that mode. However in COMBI EDIT and PROG EDIT modes, the [0A] SELECT page for COMBI or PROG will appear first, and pressing the PAGE+ button will jump to the previously selected parameter. The page memory will be cleared if you use [0A] to change the COMBI or PROG number. This also applies to Combination Play mode parameters when the RE1 is connected.

4A MIDI DATA DUMP

```
4A MIDI DUMP
PROGRAM        OK?
```

4A		PROGRAM	Transmit all program parameters
		COMBINATION	Transmit all combination parameters
		GLOBAL	Transmit global parameters ([0A] — [1E])
		DRUM KIT	Transmit all drum data
		ALL DATA	Transmit all program/combination/global/drum parameters
	OK?	[OK?]	Execute dump

▼ Internal data parameters can be transmitted (dumped) via MIDI.

  • When this page is selected, MIDI data dumps can be transmitted and received regardless of the MIDI exclusive filtering setting.
  • In order for data to be received, the MIDI global channel must match that of the transmitting device, and memory protect must be turned "OFF". No other special measures are necessary when receiving data.

* PROGRAM transmits all program parameters. Transmission time is 2.7 seconds.

* COMBINATION transmits all combination data. Transmission time is 4.5 seconds.

* GLOBAL DATA transmits global parameters ([0A] – [1E], [3C]). Transmission time is nearly instantanious.

* DRUM KIT transmits all drum data. Transmission time is nearly instantaneous.

* ALL DATA transmits program parameters, combination parameters, drum data, and global parameters at once. Transmission time is 7.7 seconds.
  • Move the cursor to "OK" and press the △ /YES key, and the data dump will be executed.

☆ MIDI devices such as the SQD-8 which can save exclusive data allow you to store voice data using an external device.

Data type	Length of exclusive message
Program (100)	approximately 8.6 Kbytes
Combination (100)	approximately 14.4 Kbytes
Global data	31 bytes
Drum data	approximately 1.0 Kbyte
All data	approximately 24.0 Kbytes

☆ For details of the exclusive message data format, see the end of this manual. You may also refer to the separate volume MIDI MINI TEXT.

5A LOAD FROM CARD / SAVE TO CARD / FORMAT CARD / PRESET DATA LOAD

5A LOAD CARD Load OK?	5B SAVE Save to CARD OK?	5C FORMAT Format CARD OK?	5D PRESET DATA LOAD OK?

5A		LOAD FROM CARD	Load all program / combination / drum data / global data from card
		[OK]	Execute loading
5B		SAVE TO CARD	Save all program / combination / drum data / global data to card
		[OK]	Execute saving
5C		FORMAT CARD	Format a RAM card
		[OK]	Execute formatting
5D		PRESET DATA LOAD	Load the preset data (program/combination/drum data)
		[OK?]	Execute formatting (initialization)

▼ LOAD FROM CARD loads (writes) data saved in a ROM card or RAM card into internal memory.

> The previous data in internal memory will be lost when you load, so be sure to save the internal memory data to another card first.

- Loading will not be possible if memory protect is set. (Use [3A] [3B] to defeat memory protect.)
- Move the cursor to "OK" and press △ /YES to execute loading.

☆ Programs C00 – C99 specified by combination parameters will be replaced with I00 – I99 when they are loaded from card into internal memory.

☆ The demo performance data in a card cannot be loaded into memory.

▼ SAVE TO CARD saves (writes) data from internal memory to a RAM card.

- Before saving data into a new card, you must first format (initialize) it using the steps explained in the following section [5C].
- Saving will not be possible if the card memory protect is set. (Use [3A] [3B] to defeat memory protect.)
- The protect slider located on the upper part of the card must be set to "OFF".

> When you save data into a card, the previous data in the card will be lost. To avoid accidentally losing important card data, leave the card protect switch on.

- Move the cursor to "OK?" and press △/YES to execute saving.

☆ Programs I00 – I99 specified by combination parameters will be replaced with C00 – C99 when they are saved from internal memory to a card.

▼ FORMAT CARD determines the format of a RAM card, and initializes it to accept data.

☆ When purchasing a card, specify the Korg Memory Card RAM (256K Bits) "MCR-03".

- Newly purchased RAM cards must be formatted before they can be used to save or write data.

> Formatting a card which already contains data will erase all the data in the card. To avoid accidentally losing important card data, leave the card protect switch on.

- Move the cursor to "OK?" and press △ /YES to execute formatting.

▼ PRESET DATA LOAD will load the preset data (factory settings) from internal ROM into the internal memory.

- Move the cursor to "OK?", and if you are sure you want to load the preset data, press △/YES. The preset data will overwrite the data previously in internal memory. (Be sure to save your important data to a card before using this function.)

CONNECTION TO THE RE1

Connecting the separately sold RE1 Remote Editor will speed up editing and other operations.

CONNECTIONS

First, turn off the power of the M3R.

(1) Using the cable included with the RE1, connect the M3R rear panel REMOTE jack and the RE1 REMOTE jack

(2) Turn the M3R power on. Power will be applied to the RE1 at the same time and the RE1 will be able to control the M3R.

Note:
While the RE1 is connected, the R3R will display "Remote Control from RE1" and none of its switches will function. The LEDs of each key will function only as MIDI indicators, and will not indicate the mode. (When Exclusive Data is recieved, the 'PLAY' LED will illuminate.)

RE1 OPERATION

♦Function key operations

Affix the RE1 stickers included with the M3R.
The function key corresponding to each mode will light (except for Demo Play). Please affix the accessory real to the M3R.

M3R	RE1
COMBINATION PLAY MODE	F1
COMBINATION EDIT MODE	F2
PROGRAM EDIT MODE	F3
EFFECT MODE	F4
GLOBAL MODE	F5
DRUMS MODE	F6
DEMO PLAY	F1 + F2

♦To select combinations

(in COMBINATION PLAY mode)

(1) Use function key 1 (F1, 2) to select COMBINATION PLAY mode.

(2) Use the 0 – 9 and the UP/DOWN keys to select the COMBINATION NO. Press any key to stop playback.

- If a Program card is inserted into the M3R, you will also be able to use the CARD key to select combinations from a card (C00—C99).

♦To hear the demo songs

(1) Simultaneously press function keys 1 and 2 (F1, 2) and you will enter demo play mode.

(2) When you press a key 0—4, the corresponding demo song will begin playing. If you press key 5, all the demo songs will play back successively. Press any key to stop playback.

(3) When you press function key 1 or 2 (F1, 2) once again, you will exit demo play mode.

♦To edit parameters

(1) Use the function keys to select the mode you wish to edit.

(2) Use the PAGE+, PAGE- and 0 – 9 keys to select the page.

I: Use the PAGE+, PAGE- keys to select the page to edit. (These work in the same way as the PAGE+ and PAGE- keys of the M3R.)

II: Use the 0 – 9 keys to select the page number.

(3) Use the A – H keys and the sliders to edit the parameter.

I: When you press a key A – H, the parameter displayed in the LCD above the key will blink, and you can edit that parameter. Pressing UP/DOWN will modify the value of that parameter. (These work in the same way as the △/YES ▽/NO keys of the M3R.)

II: When you move a slider A – H, the parameter displayed in the LCD above the slider will be modified. (There is no need to press a key A – H.)

THE DISPLAY

The cursor printed here indicates the parameter which will flash on the display.

COMBINATION PLAY mode

- In this mode you can select and play Combinations. You can also edit the Program numbers used by each Combination, and adjust the output levels in realtime. (However these changes will not be written, so if you want to keep your edits, enter Combination Edit mode and write them into memory.)
- Even while editing the program number or the output level, you can press the F1 key to return to the same condition as when you first selected that combination
- Displays will differ depending on the combination type

SINGLE

```
COMBI 101 GrandPiano
100:Piano 1G'  Level=99
 A  B  C  D  E  F  G  H
```

Key and slider A will select programs. (Keys and sliders B and C will have the same effect.)
Key and slider D will adjust the output level. (Keys and sliders E—H will have the same effect.)

LAYER

```
COMBI 103 String Pad
137:Analog 1   L99  136:Strings   L42
 A  B  C  D  E  F  G  H
```

— Layer 1 or layer 2 program will blink

Key and slider A will select the program of layer 1. (B and C will have the same effect.)
Key and slider D will adjust the level of layer 1.
Key and slider E will select the program of layer 2. (F and G will have the same effect.)
Key and slider H will adjust the level of layer 2

SPLIT

```
COMBI C01 Combi  002
121:DigiBell 2 SP=C4    125:Kalimba
 A  B  C  D  E  F  G  H
```

— Upper or lower program will blink

Key and slider A will select the program of the lower layer. (B and C will have the same effect.)
Key and slider D will adjust the split point. (E will have the same effect.)
Key and slider F will select the program of the upper layer. (G and H will have the same effect.)

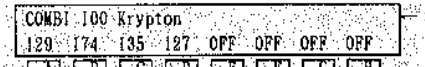
VELOCITY SWITCH

```
COMBI C03 Combi  003
134:Voices    VP=063   145:DWGS Voice
 A  B  C  D  E  F  G  H
```

— Soft or loud program will blink

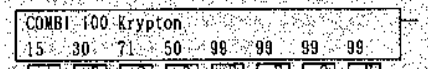
Key and slider A will select the program of the soft layer. (B and C will have the same effect.)
Key and slider D will adjust the velocity switch point. (E will have the same effect.)
Key and slider F will select the program of the loud layer. (G and H will have the same effect.)

◆ MULTI



PROGRAM NAME

Keys and sliders A—H will select the programs for timbres 1—8.



Program name for which level is being set.

When you press the PAGE+ keys, the output level of each timbre will be displayed. Use the keys and sliders to adjust the output levels.

Modes other than COMBINATION PLAY

(1) Use the function keys to select the mode to edit.
(2) Use the 0—9 and PAGE+/PAGE- keys to select the page to edit.
(3) Use keys and sliders A—H and the UP/DOWN keys to select and edit parameters.
- Keys 0—9 will directly select pages. Pages such as "x — x" can be selected as follows.

Example: To select "5—1", press the 5 key and then the PAGE+ key once.

■ COMBINATION EDIT mode ■ (F2)

PAGE		MBR PAGE
0	COMBINATION SELECT/RENAME/WRITE  • Use A (or B. In this section, A—H in parentheses following a key indicates that these keys will have the same operation.) to select the combination number to edit. • Use the C, D keys to move the cursor to the character to modify, and use sliders C—E or the UP/DOWN keys to modify the character. • Press the F key to get the "Are You Sure?" display. If you want to write the new setting into memory, press the G key (YES). Otherwise press the H key (NO). After executing writing, press a key A—H to return to the previous display.	0 A～0 C
1	COMBINATION TYPE SELECT  When you press the UP/DOWN keys or move a slider A—H, the display will show [SELECT] above G and H. Use A—F to select the combination type, and press the G key (SELECT) to finalize your selection.	1 A
	Pages 2 and later will differ according to the combination type.

[A] [B] [C] [D] [E] [F] [G] [H]

EARLY REFLECTION

7. EARLY REFLECTION 1 (common to 7—9)

```
EFFECT 1  Early Ref 1     E/R Time [ms]
Time170   D030            L+00 H+00 60:40
```

[A] [B] [C] [D] [E] [F] [G] [H]

A : Early Reflection Time
B : -----
C : Pre Delay
D : -----
E : -----
F : Equalizer Low
G : Equalizer High
H : Effect Balance

8. EARLY REFLECTION 2

```
EFFECT 1  Early Ref 2     E/R Time [ms]
Time200   D020            L+00 H+00 60:40
```

[A] [B] [C] [D] [E] [F] [G] [H]

9. EARLY REFLECTION 3

```
EFFECT 1  Early Ref 3     E/R Time [ms]
Time190   D010            L+00 H+00 60:40
```

[A] [B] [C] [D] [E] [F] [G] [H]

DELAY

10. STEREO DELAY (common to 10, 11)

```
EFFECT 1  Stereo DLY      Time L [ms]
L250 R260 F+50 HD10       L+00 H+00 70:30
```

[A] [B] [C] [D] [E] [F] [G] [H]

A : Delay Time Left
B : Delay Time Right
C : Feedback
D : High Damp
E : -----
F : Equalizer Low
G : Equalizer High
H : Effect Balance

11. CROSS DELAY

```
EFFECT 1  Cross Delay     Time L [ms]
L180 R360 F+80 HD10       L+00 H+00 70:30
```

[A] [B] [C] [D] [E] [F] [G] [H]

CHORUS

12. STEREO CHORUS 1 (common to 12, 13)

```
EFFECT 1  Chorus 1        Mod Depth
M60  S0.30 D010 TRI       L+00 H+00 60:40
```

[A] [B] [C] [D] [E] [F] [G] [H]

A : Modulation Depth
B : Modulation Speed
C : Delay Time
D : Modulation Waveform
E : -----
F : Equalizer Low
G : Equalizer High
H : Effect Balance

13. STEREO CHORUS 2

```
EFFECT 1  Chorus 2        Mod Depth
M20  S2.40 D005 SIN       L+00 H+00 60:40
```

[A] [B] [C] [D] [E] [F] [G] [H]

FLANGER

14. STEREO FLANGER (common to 14, 15)

```
EFFECT 1  Flanger         Mod Depth
M70  S0.18 D00  F-75 SIN  L+00 H+00 40:60
```

[A] [B] [C] [D] [E] [F] [G] [H]

A : Modulation Depth
B : Modulation Speed
C : Delay Time
D : Feedback

15. CROSS FLANGER

```
EFFECT 1  X.Flanger       Mod Depth
M37  S0.21 D25  F+80 SIN  L+00 H+00 25:75
```

[A] [B] [C] [D] [E] [F] [G] [H]

E : Modulation Waveform
F : Equalizer Low
G : Equalizer High
H : Effect Balance

PHASER

16. PHASER 1 (common to 16, 17)

```
EFFECT 1  Phaser 1        Manual
MN99 S0.69 M60 F-75 SIN                25:75
```

[A] [B] [C] [D] [E] [F] [G] [H]

A : Manual
B : Modulation Speed
C : Modulation Depth
D : Feedback
E : Modulation Waveform
F : -----
G : -----
H : Effect Balance

17. PHASER 2

```
EFFECT 1  Phaser 2        Manual
MN99 S0.57 M69 F+87 TRI                60:40
```

[A] [B] [C] [D] [E] [F] [G] [H]

TREMOLO

18. STEREO TREMOLO 1 (common to 18, 19)

```
EFFECT 1  Tremolo 1       Mod Depth
M80  S1.59 SIN S+99       L+00 H+00  EFF
```

[A] [B] [C] [D] [E] [F] [G] [H]

A : Modulation Depth
B : Modulation speed
C : Modulation Waveform
D : Shape
E : -----
F : Equalizer Low
G : Equalizer High
H : Effect Balance

19. STEREO TREMOLO 2

```
EFFECT 1  Tremolo 2       Mod Depth
M63  S04.0 TRI S+00       L+00 H+00  EFF
```

[A] [B] [C] [D] [E] [F] [G] [H]

EQUALIZER

20. EQUALIZER

```
EFFECT 1  Equalizer       Low Gain [dB]
Low+00    500      High+00    2K    EFF
```

[A] [B] [C] [D] [E] [F] [G] [H]

A : Low Gain
B : -----
C : Low Frequency
D : -----
E : High Gain
F : High Frequency
G : -----
H : Effect Balance

OVER DRIVE

21. OVER DRIVE

```
EFFECT 1  Over Drive      Drive
D080 L015                 L+00 H+00  EFF
```

[A] [B] [C] [D] [E] [F] [G] [H]

A : Drive
B : Level
C : -----
D : -----
E : -----
F : Equalizer Low
G : Equalizer High
H : Effect Balance

22. DISTORTION

```
EFFECT 1  Distortion      Distortion
D080 L020                 L+00       EFF
```

[A] [B] [C] [D] [E] [F] [G] [H]

A : Distortion
B : Level
C : -----

D:-----
E:-----
F:Equalizer Low
G:-----
H:Effect Balance

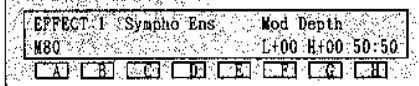
EXCITER

23 EXCITER

A:Blend
B:-----
C:Emphatic Point
D:-----
E:-----
F:Equalizer Low
G:Equalizer High
H:Effect Balance

ENSEMBLE

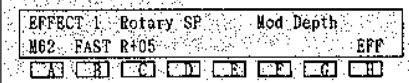
24 SYMPHONIC ENSEMBLE



A:Modulation Depth
B:-----
C:-----
D:-----
E:-----
F:Equalizer Low
G:Equalizer High
H:Effect Balance

ROTARY SPEAKER

25 ROTARY SPEAKER



A:Modulation Depth
B:Speed
C:Speed Ratio
D:-----

■GLOBAL mode ■ (F5)

PAGE		MBR PAGE
0	MASTER TUNE/KEY TRANSPOSE 	0 A
1	SCALE TYPE  When the Scale Type is Pure Major or Pure Minor, use the G, H keys to set the Key. When you select User Scale and press the PAGE+ key, the scale setting page will appear.	1 A, 1 B
1 – 1	(USER SCALE) This is displayed when PAGE 1 SCALE TYPE is set to User Scale  Keys and sliders B—H correspond to notes C—B, and will increase in half-steps each time you press the A key. Use slider A to make settings for the black keys.	1 B ~ 1 E
2	MIDI GLOBAL 	2 A
3	MIDI FILTERING 	2 B, 2 C

4	MEMORY PROTECT 	3 A, 3 B
4 – 1	EFFECT INTERLOCK 	3 C
4 – 2	PAGE MEMORY 	3 D
5	MIDI DATA DUMP  Use A—F to select the data that you want to dump, and press G—H to transmit the data from MIDI OUT.	4 A
6	LOAD FROM CARD  Press a key A—H to get the "Are You Sure?" display. If you want to load the data, press the G key (YES). If not, press the H key (NO).	5 A
7	SAVE TO CARD  Press a key A—H to get the "Are You Sure?" display. If you want to save the data, press the G key (YES). If not, press the H key (NO).	5 B
8	FORMAT CARD  Press a key A—H to get the "Are You Sure?" display. If you want to format the card, press the G key (YES). If not, press the H key (NO).	5 C
9	PRESET DATA LOAD  Press a key A—H to get the "Are You Sure?" display. If you want to load the preset data, press the G key (YES). If not, press the H key (NO).	5 D

After executing in pages 5—9, press a key A—H to return to the previous display.

Received when in
G : GLOBAL, DRUMS MODE
(◎···Does not respond to Exclusive On, Off in DATA DUMP Page)
C : COMBI, COMBI E, EFF MODE
P : PROG E MODE

No. : MIDI Out Function No. transmitted after the message has been received.

3. MIDI EXCLUSIVE MESSAGE FORMAT

R : Received, T : Transmitted

(1) MODE REQUEST R

Byte	Description
F0, 42, 3n, 24	EXCLUSIVE HEADER
0001 0010	MODE REQUEST 12H
1111 0111	EOX

Receives this message, and transmits Func=42 message.

(2) DRUMS SOUND(PCM Card) NAME DUMP REQUEST R

Byte	Description
F0, 42, 3n, 24	EXCLUSIVE HEADER
0001 1111	DRUMS SOUND(Card) NAME DUMP REQ. 1FH
1111 0111	EOX

Receives this message, and transmits Func=47 or Func=24 message.

(3) MULTISOUND(PCM Card) NAME DUMP REQUEST R

Byte	Description
F0, 42, 3n, 24	EXCLUSIVE HEADER
0001 0110	MULTISOUND(Card) NAME DUMP REQ. 16H
1111 0111	EOX

Receives this message, and transmits Func=45 or Func=24 message.

(4) PROGRAM PARAMETER DUMP REQUEST R

Byte	Description
F0, 42, 3n, 24	EXCLUSIVE HEADER
0001 0000	PROGRAM PARAMETER DUMP REQUEST 10H
1111 0111	EOX

Receives this message, and transmits Func=40 or Func=24 message.

(5) ALL PROGRAM PARAMETER DUMP REQUEST R

Byte	Description
F0, 42, 3n, 24	EXCLUSIVE HEADER
0001 1100	ALL PROGRAM PARAMETER DUMP REQUEST 1CH
0000 000c	Bank (See NOTE 3)
1111 0111	EOX

Receives this message, and transmits Func=4C or Func=24 message.

(6) COMBINATION PARAMETER DUMP REQUEST R

Byte	Description
F0, 42, 3n, 24	EXCLUSIVE HEADER
0001 1001	COMBINATION PARAMETER DUMP REQUEST 19H
1111 0111	EOX

Receives this message, and transmits Func=49 or Func=24 message.

(7) ALL COMBINATION PARAMETER DUMP REQUEST R

Byte	Description
F0, 42, 3n, 24	EXCLUSIVE HEADER
0001 1101	ALL COMBI. PARAMETER DUMP REQUEST 1DH
0000 000c	Bank (See NOTE 3)
1111 0111	EOX

Receives this message, and transmits Func=4D or Func=24 message.

(8) GLOBAL DATA DUMP REQUEST R

Byte	Description
F0, 42, 3n, 24	EXCLUSIVE HEADER
0000 1110	GLOBAL DATA DUMP REQUEST 0EH
0000 000c	Bank (See NOTE 3)
1111 0111	EOX

Receives this message, and transmits Func=51 or Func=24 message.

(9) DRUMS DATA DUMP REQUEST R

Byte	Description
F0, 42, 3n, 24	EXCLUSIVE HEADER
0000 1101	DRUMS DATA DUMP REQUEST 0DH
0000 000c	Bank (See NOTE 3)
1111 0111	EOX

Receives this message, and transmits Func=52 or Func=24 message.

(10) ALL DATA(GLOBAL, DRUMS, COMBI, PROG) DUMP REQUEST R

Byte	Description
F0, 42, 3n, 24	EXCLUSIVE HEADER
0000 1111	ALL DATA(GLB, DRM, CMB, PRG) DUMP REQ. 0FH
0000 000c	Bank (See NOTE 3)
1111 0111	EOX

Receives this message, and transmits Func=50 or Func=24 message

(11) PROGRAM WRITE REQUEST R

Byte	Description
F0, 42, 3n, 24	EXCLUSIVE HEADER
0001 0001	PROGRAM WRITE REQUEST 11H
0000 000c	Bank (See NOTE 3)
0ppp pppp	Write Program No. (0~99)
1111 0111	EOX

Receives this message, and writes the data and transmits Func=21 or Func=22 message.

(12) COMBINATION WRITE REQUEST R

Byte	Description
F0, 42, 3n, 24	EXCLUSIVE HEADER
0001 1010	COMBINATION WRITE REQUEST 1AH
0000 000c	Bank (See NOTE 3)
0ppp pppp	Write Combination No. (0~99)
1111 0111	EOX

Receives this message, and writes the data and transmits Func=21 or Func=22 message.

(13) PROGRAM PARAMETER DUMP R, T

Byte	Description
F0, 42, 3n, 24	EXCLUSIVE HEADER
0100 0000	PROGRAM PARAMETER DUMP 40H
0ddd dddd	Data (86Byte) (See NOTE 6)
⋮	⋮
1111 0111	EOX

Receives this message & data, and transmits Func=23 or Func=24 message.
Receives Func=10 message, and transmits this message & data.
When the Program is selected No. by SW, this message & data is transmitted.

(14) ALL PROGRAM PARAMETER DUMP R, T

Byte	Description
F0, 42, 3n, 24	EXCLUSIVE HEADER
0100 1100	ALL PROGRAM PARAMETER DUMP 4CH
0000 000c	Bank (See NOTE 3)
0ddd dddd	Data (8572Byte) (See NOTE 7)
⋮	⋮
1111 0111	EOX

Receives this message & data, and transmits Func=23 or Func=24 message.
Receives Func=1C message, and transmits this message & data.
Transmits this message & data when DATA DUMP is executed.

(15) COMBINATION PARAMETER DUMP R, T

Byte	Description
F0, 42, 3n, 24	EXCLUSIVE HEADER
0100 1001	COMBINATION PARAMETER DUMP 49H
0ddd dddd	Data (144Byte) (See NOTE 8)
⋮	⋮
1111 0111	EOX

Receives this message & data, and transmits Func=23 or Func=24 message.
Receives Func=19 message, and transmits this message & data.
When the Combi No. is selected by SW, this message & datais transmitted.

(16) ALL COMBINATION PARAMETER DUMP R, T

Byte	Description
F0, 42, 3n, 24	EXCLUSIVE HEADER
0100 1101	ALL COMBINATION PARAMETER DUMP 4DH
0000 000c	Bank (See NOTE 3)
0ddd dddd	Data (14400Byte) (See NOTE 9)
⋮	⋮
1111 0111	EOX

Receives this message & data, and transmits Func=23 or Func=24 message.
Receives Func=1D message, and transmits this message & data.
Transmits this message & data when DATA DUMP is executed.

(17) GLOBAL DATA DUMP R, T

Byte	Description
F0, 42, 3n, 24	EXCLUSIVE HEADER
0101 0001	GLOBAL DATA DUMP 51H
0000 000c	Bank (See NOTE 3)
0ddd dddd	Data (24Byte) (See NOTE 10)
⋮	⋮
1111 0111	EOX

Receives this message & data, and transmits Func=23 or Func=24 message.
Receives Func=0E message, and transmits this message & data.
Transmits this message & data when DATA DUMP is executed

(18) DRUMS DATA DUMP R, T

Byte	Description	
F0, 42, 3n, 24	EXCLUSIVE HEADER	
0101 0010	DRUMS DATA DUMP	52H
0000 000c	Bank	(See NOTE 3)
0ddd dddd	Data (960Byte)	(See NOTE 11)
⋮	⋮	
1111 0111	EOX	

Receives this message & data, and transmits Func=23 or Func=24 message.
Receives Func=0D message, and transmits this message & data.
Transmits this message & data when DATA DUMP is executed.

(19) ALL DATA(GLOBAL, DRUMS, COMBI, PROG) DUMP R, T

Byte	Description	
F0, 42, 3n, 24	EXCLUSIVE HEADER	
0101 0000	ALL DATA(GLB, DRM, CMB, PRG) DUMP	50H
0000 000c	Bank	(See NOTE 3)
0ddd dddd	Data (23956Byte)	(See NOTE 12)
⋮	⋮	
1111 0111	EOX	

Receives this message & data, and transmits Func=23 or Func=24 message.
Receives Func=0F message, and transmits this message & data.
Transmits this message & data when DATA DUMP is executed.

(20) MODE CHANGE R, T

Byte	Description	
F0, 42, 3n, 24	EXCLUSIVE HEADER	
0100 1110	MODE CHANGE	4EH
000b rmmm	Mode Data	(See NOTE 1, 2)
000b 000c	Bank	(See NOTE 2, 3)
1111 0111	EOX	

Receives this message & data, and changes the Mode, Bank and transmits Func=23 or Func=24 message.
When the Mode is changed by SW, transmits this message & data(b of Mode=0, b of Bank=1).
When the Controller(M3R or REI) is changed, transmits this message & data (b of Bank & Mode=1).
When the Bank is changed by SW, transmits this message & data(b of Mode=1, b of Bank=0).

(21) PARAMETER CHANGE R, T

Byte	Description	
F0, 42, 3n, 24	EXCLUSIVE HEADER	
0100 0001	PARAMETER CHANGE	41H
0ppp pppp	Parameter No.	(See TABLE 5)
0vvv vvvv	Value (bit6-0)	(See NOTE 13)
0vvv vvvv	Value (bit15-7)	(See NOTE 13)
1111 0111	EOX	

Receives this message & data, and transmits Func=23 or Func=24 message.
When the Parameter No. is changed by SW, and transmits this message & data.

(22) MODE DATA T

Byte	Description	
F0, 42, 3n, 24	EXCLUSIVE HEADER	
0100 0010	MODE DATA	42H
0000 rmmm	Mode Data	(See NOTE 1)
00tt 00mm	Card Variation	(See NOTE 4)
0000 00cc	PCM Card Variation	(See NOTE 5)
1111 0111	EOX	

Receives Func=12 message, and transmits this message & data.

(23) DRUM SOUND(PCM Card) NAME T

Byte	Description	
F0, 42, 3n, 24	EXCLUSIVE HEADER	
0100 0111	DRUM SOUND(PCM Card) NAME	47H
0sss ssss	Drum Sound Number	(See NOTE 14)
0ddd dddd	Data	(See NOTE 14)
⋮	⋮	
1111 0111	EOX	

Receives Func=1F message, and transmits this message & data, or transmits Func=24 message.

(24) MULTISOUND(PCM Card) NAME T

Byte	Description	
F0, 42, 3n, 24	EXCLUSIVE HEADER	
0100 0101	MULTISOUND(PCM Card) NAME	45H
0sss ssss	Multi Sound Number	(See NOTE 15)
0ddd dddd	Data	(See NOTE 15)
⋮	⋮	
1111 0111	EOX	

Receivs Func=16 message, and transmits this message & data, or transmits Func=24 message.

(25) MIDI IN DATA FORMAT ERROR T

Byte	Description	
F0, 42, 3n, 24	EXCLUSIVE HEADER	
0010 0110	MIDI IN DATA FORMAT ERROR	26H
1111 0111	EOX	

Transmits this message when there is an error in the MIDI IN message (ex. data length).

(26) DATA LOAD COMPLETED T

Byte	Description	
F0, 42, 3n, 24	EXCLUSIVE HEADER	
0010 0011	DATA LOAD COMPLETED	23H
1111 0111	EOX	

Transmits this message when DATA LOAD, PROCESSING have been completed.

(27) DATA LOAD ERROR T

Byte	Description	
F0, 42, 3n, 24	EXCLUSIVE HEADER	
0010 0100	DATA LOAD ERROR	24H
1111 0111	EOX	

Transmits this message when DATA LOAD, PROCESSING have failed (ex. protected).

(28) WRITE COMPLETED T

Byte	Description	
F0, 42, 3n, 24	EXCLUSIVE HEADER	
0010 0001	WRITE COMPLETED	21H
1111 0111	EOX	

Transmits this message when DATA WRITE MIDI has been completed.

(29) WRITE ERROR T

Byte	Description	
F0, 42, 3n, 24	EXCLUSIVE HEADER	
0010 0010	WRITE ERROR	22H
1111 0111	EOX	

Transmits this message when DATA WRITE MIDI has failed.

21~27	Same as DRUM KIT 1	3A~3C	3	630+7n

SYSTEM EXCLUSIVE MESSAGE APPLICATIONS

MIDI Exclusive messages can be used in the following ways.

1. Transmit or receive data for All Combi, All Prog, Effect, Drums, or Global (partial)
   ... Use the MIDI data dump page of Global mode.
2. Transmit, receive, and edit data for 1 Combi, 1 Prog, Effect, and Drums.
   ... Use two M3R units both set to Exclusive ENA.
3. Adjust master tuning or determine the model number.
   ... Use a personal computer with editing software, and set the M3R to Exclusive ENA.
4. Receive data or Data Dump Requests for the above 1, 2, 3, confirm M3R status, etc.
   ... Use a personal computer with M3R editing software, and set the M3R to Exclusive ENA.

* The MIDI Global channel is used when transferring MIDI Exclusive data.

(The transmitting unit is called the "master", and the receiving unit is called the "slave".)

1 The various types of internal data can be transmitted in the Global mode MIDI data dump page (see page ??). When another M3R receives this data (the receiving M3R must be set to the same MIDI channel, with Protect Off and Exclusive ENA, or it must be in the MIDI data dump page), its previous internal data will be replaced by the newly received data.

2. When both the master and the slave are set to Exclusive ENA, you can edit the slave unit (Combi, Prog, Effect, Drums) using switch operations on the master unit (except for Rename and Write). In this situation, each time you select another Combi or Prog number on the master unit, data for 1 Combi or 1 Prog will be transmitted from the master to the slave, allowing you to copy individual Combinations or Programs. (Unless you write this newly received data, it will be overwritten by the next incoming data.)

3. When a Universal System Exclusive (an exclusive message which is not specific to any manufacturer) Device Inquiry Request message is received, the M3R will transmit the manufacturer ID (=42: Korg), the model ID (=24:M3R), and the ROM No. etc. When a RPC (Registered Parameter Controller) master tune message is received, the master tune setting will be edited.

Note:
The MIDI specification says that master tuning will be done as follows.
(1) Bn, 64, 01, Bn, 65, 00 selects Master Tune (n: MIDI channel)
(2) Bn, 06, vv, Bn, 26, vv determines the value (14 bit)

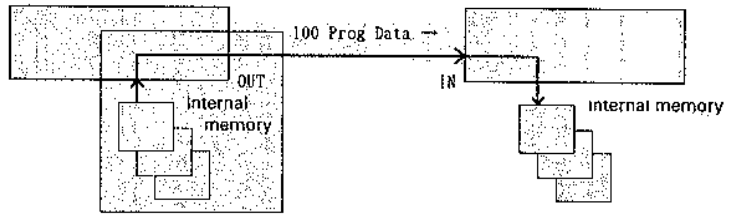
MSB	LSB	
(7 bit)	(7 bit)	00, 00 – 40, 00 – 7F, 7F
		-100 – ±0 – +99.9(cents)

However, the M3R will
(1) enter the master tune page of Global mode when the data is received,
(2) and modify the value in steps of 1 cent. However since the M3R tuning range is ±50 cents, only values of the range 20,00 to 60,00 will be effective, and values outside this range will be treated as either -50 or +50 cents.

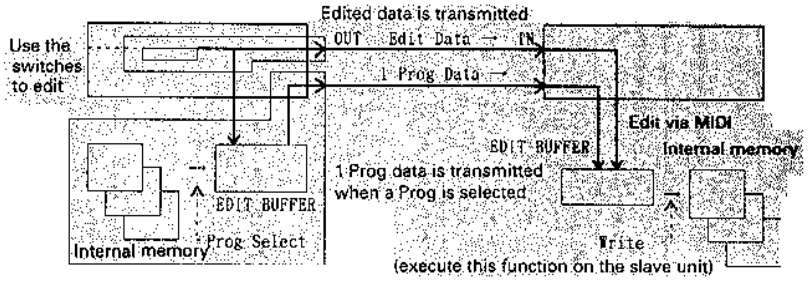
4. By connecting the M3R to a personal computer with M3R editing software, you can perform the operations described above in 1, 2, 3, receive a Write Request and write data, check the contents (names only) of a PCM card, and the condition of the unit (the mode, and the type of card that is inserted).

MASTER SLAVE

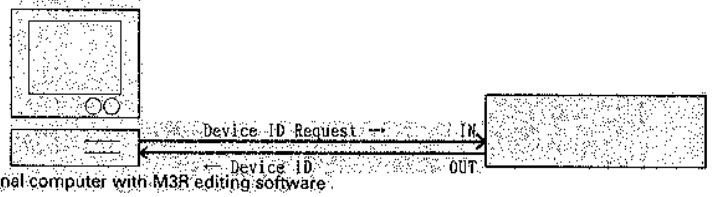
1. Example; Dumping all Program data (since internal memory is being transferred, the edit buffer will not be affected)



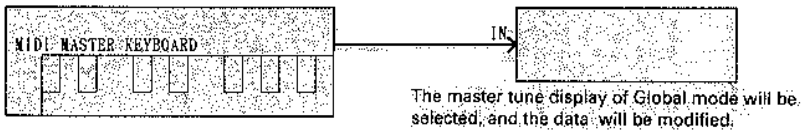
2. Example: Dumping and editing Program data



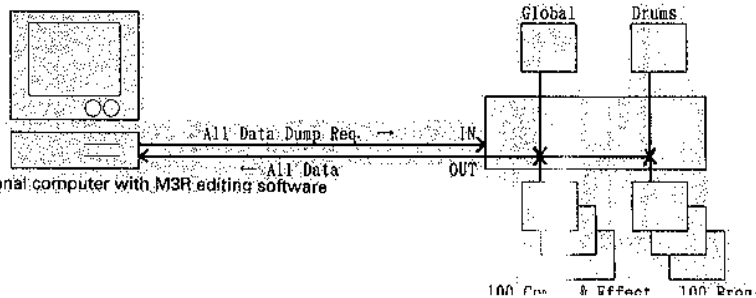
3. Universal system exclusive Device Inquiry



Master tune using RPC



4. Example: Request All data dump



ERROR MESSAGES

Error message	Explanation
Battery Low	The voltage of the internal memory backup battery is low. (Contact your nearby service representative or dealer.)
CARD Battery Low	The voltage of the card backup battery is low. (Temporarily save the card data into internal memory, replace the card battery, and save the data from internal memory back into the card. When you remove the card battery, all card data will be lost.)
Invalid CARD	The inserted card does not contain data or is not formatted for the M3R. (To use this card, you must execute GLOBAL mode [5C] Format Cartridge.)
Memory Protected	The memory into which you attempted to write (internal or card) is protected by the GLOBAL mode protect setting.
No CARD Inserted	You tried to read or write card data when no card was inserted.
ROM/Protected	You tried to write data into a ROM card or into a RAM card whose protect switch was ON.
Unformatted CARD	The inserted card has not been formatted (initialized) for use with the M3R. (To use this card, execute GLOBAL mode [5C] Format Card.

SPECIFICATIONS AND OPTIONS

System	: AI synthesis system (full digital processing)
Tone generator	: 16 voice, 16 oscillator
Wave memory	: PCM 16 Mbit
Effect section	: 2 systems of digital multi-effects
Number of program	: 100 programs
Number of combinations	: 100 combinations
Demo	: 5 songs
Outputs	: 1/L, 2/R, 3, 4, headphones
Card slot	: PCM data, programs
MIDI	: IN, OUT, THRU REMOTE jack
Display	: 16 character x 2 line backlit LCD
Options	: RAM card (MCR-03), ROM cards, PCM cards
Power supply	: 100 V
Power consumption	: 11 W nominal
External dimensions	: 430 (W) x 405 (D) x 88 (H) mm
Weight	: 5.9 Kg (not including rack-mount adapter)

* Specifications and appearance are subject to change without notice for product improvement.

TROUBLESHOOTING

Problem	Possible reason
No LCD display even though the POWER switch is on	• Is the power cable connected to an AC outlet?
No sound	• Is an amp or headphone connected to the correct socket? • Is the master volume raised? • Are any of the level parameters in each mode set to 0? • Are you playing a key which the split or pitch range produces no sound? • Are MIDI connections between the keyboard and the M3R correct? • Do the MIDI channels of the keyboard and the M3R match?
Cannot format a card	• Is the card protect switch set to ON?
Cannot save data to card	• Are you using an unformatted card? • Is the card protect switch set to ON? • Are you using a ROM card? • Is the card correctly inserted?
Cannot load data from card	• Is the card correctly inserted? • Does the card contain data?
The sound is wrong	• Is the same PCM card inserted as when you created the sound? • Is the same PROG data card inserted as when you created the combination data?

NOTICE

KORG products are manufactured under strict specifications and voltages required by each country. These products are warranted by the KORG distributor only in each country. Any KORG product not sold with a warranty card or carrying a serial number disqualifies the product sold from the manufacturer's/distributor's warranty and liability. This requirement is for your own protection and safety.
